Clinical trial results:
A Phase 2, Randomized, Double Blind, Placebo-Controlled, Study to Evaluate the Safety and Efficacy of PF-06826647 in Participants With Moderate to Severe Plaque Psoriasis

Summary

EudraCT number	2018-004669-16
Trial protocol	PL
Global end of trial date	26 November 2020

Results information

Result version number	v1 (current)
This version publication date	22 May 2021
First version publication date	22 May 2021

Trial information

Trial identification

Sponsor protocol code	C2501004

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03895372

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 April 2021
Is this the analysis of the primary	No

completion data?	
Global end of trial reached?	Yes
Global end of trial date	26 November 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study was conducted to provide data on efficacy, safety, tolerability, and pharmacokinetics of PF-06826647 in the oral treatment of moderate to severe plaque psoriasis.

Protection of trial subjects:

This study was conducted in compliance with the ethical principles originating in or derived from the Declaration of Helsinki and in compliance with all International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) Good Clinical Practice (GCP) Guidelines. In addition, all local regulatory requirements were followed, in particular, those affording greater protection to the safety of trial subjects.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 June 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 19
Country: Number of subjects enrolled	Japan: 13
Country: Number of subjects enrolled	United States: 47
Country: Number of subjects enrolled	Poland: 99
Worldwide total number of subjects	178
EEA total number of subjects	99

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	166
From 65 to 84 years	12
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study included 2 treatment periods (16-week investigational treatment period and 24-week extension treatment period) followed by a 4-week follow-up. A total of 179 subjects were enrolled and 178 subjects were treated in investigational treatment period and 153 subjects completed this period and entered the extension treatment period.

Pre-assignment

Screening details:

This was a Phase 2b, randomized, double blind, placebo-controlled, parallel group, and multicenter study in subjects with moderate to severe plaque psoriasis.

Period 1

Period 1 title	Investigational Treatment Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo QD->PF-06826647 200 mg QD Group

Arm description:

This study included 2 treatment periods: 16-week investigational treatment period and 24-week extension treatment period. The enrolled subjects entered the investigational treatment period first and then the subjects who completed the investigational treatment period entered the extension treatment period. The subjects in this group received matching placebo (2*25 mg size placebo and 4*100 mg size placebo)once a day (QD) in the investigational treatment period (16 weeks) and PF-06826647 200 mg QD in the extension treatment period (24 weeks). The maximum duration of treatment was 116 days in investigational treatment period and 187 days in extension treatment period.

Arm type	Placebo
Investigational medicinal product name	Placebo oval tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

6 tablets (2 × 25 mg size placebo and 4 × 100 mg size placebo) per day.

Arm title	Placebo QD->PF-06826647 400 mg QD Group

Arm description:

This study included 2 treatment periods: 16-week investigational treatment period and 24-week extension treatment period. The enrolled subjects entered the investigational treatment period first and then the subjects who completed the investigational treatment period entered the extension treatment period. The subjects in this group received matching placebo (2*25 mg size placebo and 4*100 mg size placebo) once a day (QD) in the investigational treatment period (16 weeks) and PF-06826647 400 mg QD in the extension treatment period (24 weeks). The maximum duration of treatment was 116 days in investigational treatment period and 176 days in extension treatment period.

Arm type	Placebo
Investigational medicinal product name	Placebo oval tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

6 tablets (2 × 25 mg size placebo and 4 × 100 mg size placebo) per day.

Arm title	PF-06826647 50 mg QD->PF-06826647 200 mg QD Group

Arm description:

This study included 2 treatment periods: 16-week investigational treatment period and 24-week extension treatment period. The enrolled subjects entered the investigational treatment period first and then the subjects who completed the investigational treatment period entered the extension treatment period. The subjects in this group received PF-06826647 50 mg once a day (QD) in the investigational treatment period (16 weeks) and PF-06826647 200 mg QD in the extension treatment period (24 weeks). The maximum duration of treatment was 119 days in investigational treatment period and 182 days in extension treatment period.

Arm type	Experimental
Investigational medicinal product name	PF-06826647
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

2 tablets (2 × 25 mg PF-06826647) per day.

Investigational medicinal product name	Placebo oval tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

4 tablets (4 × 100 mg size placebo) per day.

Arm title	PF-06826647 50 mg QD->PF-06826647 400 mg QD Group

Arm description:

This study includes 2 treatment periods: 16-week investigational treatment period and 24-week extension treatment period. The enrolled subjects entered the investigational treatment period first and then the subjects who completed the investigational treatment period entered the extension treatment period. The subjects in this group received PF-06826647 50 mg once a day (QD) in the investigational treatment period (16 weeks) and PF-06826647 400 mg QD in the extension treatment period (24 weeks). The maximum duration of treatment was 119 days in investigational treatment period and 183 days in extension treatment period.

Arm type	Experimental
Investigational medicinal product name	PF-06826647
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

2 tablets (2 × 25 mg PF-06826647) per day.

Investigational medicinal product name	Placebo oval tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

4 tablets (4 × 100 mg size placebo) per day.

Arm title	PF-06826647 100 mg QD->PF-06826647 200 mg QD Group

Arm description:

This study included 2 treatment periods: 16-week investigational treatment period and 24-week extension treatment period. The enrolled subjects entered the investigational treatment period first and then the subjects who completed the investigational treatment period entered the extension treatment period. The subjects in this group received PF-06826647 100 mg once a day (QD) in the investigational treatment period (16 weeks) and PF-06826647 200 mg QD in the extension treatment period (24 weeks). The maximum duration of treatment was 115 days in investigational treatment period and 171 days in extension treatment period.

Arm type	Experimental
Investigational medicinal product name	Placebo oval tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

5 tablets (2 × 25 mg size placebo and 3 × 100 mg size placebo) per day.

Investigational medicinal product name	PF-06826647
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

1 tablet (1 × 100 mg PF-06826647) per day.

Arm title	PF-06826647 100 mg QD->PF-06826647 400 mg QD Group

Arm description:

This study included 2 treatment periods: 16-week investigational treatment period and 24-week extension treatment period. The enrolled subjects entered the investigational treatment period first and then the subjects who completed the investigational treatment period entered the extension treatment period. The subjects in this group received PF-06826647 100 mg once a day (QD) in the investigational treatment period (16 weeks) and PF-06826647 400 mg QD in the extension treatment period (24 weeks). The maximum duration of treatment was 115 days in investigational treatment period and 174 days in extension treatment period.

Arm type	Experimental
Investigational medicinal product name	PF-06826647
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

1 tablet (1 × 100 mg PF-06826647) per day.

Investigational medicinal product name	Placebo oval tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

5 tablets (2 × 25 mg size placebo and 3 × 100 mg size placebo) per day.

Primary: Percentage of Subjects With a Psoriasis Area and Severity Index 90 (PASI 90) Response Up to Week 16 - Investigational Treatment Period

End point title	Percentage of Subjects With a Psoriasis Area and Severity Index 90 (PASI 90) Response Up to Week 16 - Investigational Treatment Period

End point description:

The PASI quantifies the severity of a subject's psoriasis based on both lesion severity and the percentage of body surface area (BSA) affected. PASI is a composite scoring by the investigator of degree of erythema, induration, and scaling (each scored separately) for each of 4 body regions (head and neck, upper limbs, trunk [including axillae and groin], and lower limbs [including buttocks]), with adjustment for the percent of BSA involved for each body region and for the proportion of the body region to the whole body. The PASI score can vary in increments of 0.1 and range from 0.0 to 72.0, with higher scores representing greater severity of psoriasis. PASI 90 response was defined as at least a 90% reduction in PASI relative to baseline. The analysis population included all randomized subjects who received at least 1 dose of study drug (PF-06826647 or placebo) after non-responder imputation applied (the subjects discontinued due to coronavirus disease 2019 were removed).

End point description:

An adverse event (AE) was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. A serious AE (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. An AE was considered treatment-emergent if the event started on or after the first dosing day and time/start time but before the last dose plus the lag time. IP=investigational product; TD=temporary discontinuation. The analysis population included all subjects who received at least 1 dose of study drug (PF-06826647 or placebo) and who entered the extension treatment period.

End point type	Primary

Primary: Number of Subjects With Treatment-Emergent Adverse Events (Treatment Related), Week 16 to Week 40 - Extension Treatment Period

End point title	Number of Subjects With Treatment-Emergent Adverse Events (Treatment Related), Week 16 to Week 40 - Extension Treatment Period[6]

End point description:

Treatment-related adverse event (AE) was any untoward medical occurrence attributed to study drug in a subject who received study drug. Serious adverse event (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. An AE was considered treatment-emergent if the event started on or after the first dosing day and time/start time but before the last dose plus the lag time. Relatedness to study drug was assessed by the investigator (Yes/No). Subjects with multiple occurrences of an AE within a category were counted once within the category. IP=investigational product; TD=temporary discontinuation. The analysis population included all subjects who received at least 1 dose of study drug (PF-06826647 or placebo) and who entered the extension treatment period.

Primary: Number of Subjects With Vital Sign Data Meeting Pre-defined Criteria, Week 16 to Week 40 - Extension Treatment Period

End point title	Number of Subjects With Vital Sign Data Meeting Pre-defined Criteria, Week 16 to Week 40 - Extension Treatment Period[11]

End point description:

The vital signs were obtained with subject in the seated position, after having sat calmly for at least 5 minutes. Criteria for vital signs abnormalities: sitting diastolic blood pressure (BP) < 50 millimeter of mercury (mmHg), sitting diastolic BP change >= 20 mmHg increase, sitting diastolic BP change >= 20 mmHg decrease, sitting systolic BP < 90 mmHg, sitting systolic BP change >= 30 mmHg increase, and sitting systolic BP change >= 30 mmHg decrease. The analysis population inluded all subjects who received at least 1 dose of inverstigaional product and who entered the extension treatment period.

End point type	Primary

End point timeframe:

From Week 16 to Week 40

Notes:

[11] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: No statistical analysis was planned for this endpoint.

Secondary: Percentage of Subjects With a Psoriasis Area and Severity Index 75 (PASI 75) Response Up to Week 16 - Investigational Treatment Period

End point title	Percentage of Subjects With a Psoriasis Area and Severity Index 75 (PASI 75) Response Up to Week 16 - Investigational Treatment Period

End point description:

The PASI quantifies the severity of a subject's psoriasis based on both "lesion severity" and the "percent of body surface area (BSA)" affected. PASI is a composite scoring by the investigator of degree of erythema, induration, and scaling (each scored separately) for each of 4 body regions (head and neck, upper limbs, trunk [including axillae and groin], and lower limbs [including buttocks]), with adjustment for the percent of BSA involved for each body region and for the proportion of the body region to the whole body. The PASI score can vary in increments of 0.1 and range from 0.0 to 72.0, with higher scores representing greater severity of psoriasis. PASI 75 response was defined as at least a 75 percent (%) reduction in PASI relative to Baseline. The analysis population included all randomized subjects who received at least 1 dose of study drug (PF-06826647 or placebo) after non-responder imputation applied (the subjects discontinued due to coronavirus disease 2019 were removed).

Secondary: Percentage of Subjects With Physician Global Assessment (PGA) of Psoriasis Score of "Clear" or "Almost Clear" and >=2 Points Improvement Up to Week 16 - Investigational Treatment Period

End point title	Percentage of Subjects With Physician Global Assessment (PGA) of Psoriasis Score of "Clear" or "Almost Clear" and >=2 Points Improvement Up to Week 16 - Investigational Treatment Period

End point description:

The PGA of psoriasis is scored on a 5-point scale, reflecting a global consideration of the erythema, induration, and scaling across all psoriatic lesions. Average erythema, induration, and scaling are scored

separately over the whole body according to a 5-point severity scale (0 [no symptom] to 4 [severe symptom]). The total score was calculated as average of the 3 severity scores and rounded to the nearest whole number score to determine the PGA score and category (0=clear; 1=almost clear; 2=mild; 3=moderate; and 4=severe). The analysis population included all randomized subjects who received at least 1 dose of study drug (PF-06826647 or placebo) after non-responder imputation applied (the subjects discontinued due to coronavirus disease 2019 were removed).

Secondary: Change From Baseline in Psoriasis Area and Severity Index (PASI) scores, Up to Week 16 - Investigational Treatment Period

End point title	Change From Baseline in Psoriasis Area and Severity Index (PASI) scores, Up to Week 16 - Investigational Treatment Period

End point description:

Combined assessment of lesion severity and area affected into single score. Body was divided into 4 sections: head, arms, trunk, legs. For each section, percent area of skin involved was estimated: 0= 0% to 6= 90–100%. Severity was estimated by clinical signs: erythema, induration, desquamation; scale: 0= none to 4= maximum. Final PASI = sum of severity parameters for each section*area score*weight of section (head: 0.1, arms: 0.2, body: 0.3, legs: 0.4); total possible score range: 0= no disease to 72= maximal disease. The analysis population included all randomized subjects who received at least 1 dose of study drug (PF-06826647 or placebo) after non-responder imputation applied (the subjects discontinued due to coronavirus disease 2019 were removed).

Secondary: Change From Baseline in PeakPruritus Numerical Rating Scale (PP-

NRS) scores, Up to Week 16 - Investigational Treatment Period

End point title	Change From Baseline in PeakPruritus Numerical Rating Scale (PP-NRS) scores, Up to Week 16 - Investigational Treatment Period

End point description:

The intensity of pruritus was assessed by a PP-NRS, an 11-category numeric rating scale from 0 to 10, which was subject reported. Subjects were asked to assess their itch over the past 24 hours, anchored by the terms "no itch" (0) and "worst itch imaginable" (10) at the ends. The analysis population included all randomized subjects who received at least 1 dose of study drug (PF-06826647 or placebo) after non-responder imputation applied (the subjects discontinued due to coronavirus disease 2019 were removed).

Secondary: Percentage of Subjects Achieving Psoriasis Symptom Inventory (PSI) Response of "Not at All" or "Mild" on Every Item, at Week 16 - Investigational Treatment Period

End point title	Percentage of Subjects Achieving Psoriasis Symptom Inventory (PSI) Response of "Not at All" or "Mild" on Every Item, at Week 16 - Investigational Treatment Period

End point description:

The Psoriasis Symptom Inventory (PSI) is a self administered 8-item questionnaire that measures the severity of psoriasis symptoms over the past 24 hours and the past 7 days. The measure includes concepts of itch, pain, burning, stinging, cracking, scaling, flaking, and redness. Subjects were asked to respond to each item using a 5-point Likert response scale: 0: not all severe, 1: mild, 2: moderate, 3: severe and 4: very severe. The analysis population included all randomized subjects who received at least 1 dose of study drug (PF-06826647 or placebo) after non-responder imputation applied (the subjects discontinued due to coronavirus disease 2019 were removed).

End point type	Secondary

Secondary: Change From Baseline in Psoriasis Symptom Inventory (PSI), Up to Week 16 - Investigational Treatment Period

End point title	Change From Baseline in Psoriasis Symptom Inventory (PSI), Up to Week 16 - Investigational Treatment Period

End point description:

The Psoriasis Symptom Inventory (PSI) is a self administered 8-item questionnaire that measures the severity of psoriasis symptoms over the past 24 hours and the past 7 days. The measure includes concepts of itch, pain, burning, stinging, cracking, scaling, flaking, and redness. Subjects were asked to respond to each item using a 5-point Likert response scale: 0: not all severe, 1: mild, 2: moderate, 3: severe and 4: very severe. The analysis population included all randomized subjects who received at least 1 dose of study drug (PF-06826647 or placebo) after non-responder imputation applied (the subjects discontinued due to coronavirus disease 2019 were removed).

Secondary: Number of Subjects With Treatment-Emergent Adverse Events (All-Causality), Up to Week 16 - Investigational Treatment Period

End point title	Number of Subjects With Treatment-Emergent Adverse Events (All-Causality), Up to Week 16 - Investigational Treatment Period

End point description:

An adverse event (AE) was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. A serious AE (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. An AE was considered treatment-emergent if the event started on or after the first dosing day and time/start time but before the last dose plus the lag time. IP=investigational product; TD=temporary discontinuation. The analysis population included all subjects who received at least 1 dose of study drug (PF-06826647 or placebo).

End point title	Number of Subjects With Treatment-Emergent Adverse Events (Treatment Related), Up to Week 16 - Investigational Treatment Period

End point description:

Treatment-related adverse event (AE) was any untoward medical occurrence attributed to study drug in a subject who received study drug. Serious adverse event (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. An AE was considered treatment-emergent if the event started on or after the first dosing day and time/start time but before the last dose plus the lag time. Relatedness to investigational product was assessed by the investigator. Subjects with multiple occurrences of an AE within a category were counted once within the category. IP=investigational product; TD=temporary discontinuation. The analysis population included all subjects who received at least 1 dose of study drug (PF-06826647 or placebo).

Adverse events information

Timeframe for reporting adverse events:

From the first dose of study treatment on Day 1 to 28 calendar days after the last dose of study treatment on Day 280.

Adverse event reporting additional description:

Each AE was to be assessed to determine if it met the criteria for SAEs. If an SAE occurred, expedited reporting followed local and international regulations, as appropriate. In Section End Points, there were 2 separate summary data for the 2 periods is because the investigational treatment period contains the data for the primary endpoint.

Assessment type	Non-systematic

Dictionary used

Dictionary name	MedDRA

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 October 2019	Removed body mass index (BMI) in Inclusion Criteria #6.3. Added two exclusion criteria in Exclusion Criteria: #13.History of recurrent (>2) venous thrombosis or any arterial thromboembolism or known blood clotting disorders. #14.History of acute coronary syndrome (eg, myocardial infarction, unstable angina pectoris) and any history of cerebrovascular disease within 24 weeks before screening. Added language to Discontinuation of Study Intervention involving thromboembolic events. Added language to Safety Adjudication Committee Section 9.5.2. The content of five Protocol Administrative Clarification Letters (PACLs) # 1-5 was added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
