Clinical trial results:
A 52-week open-label (sponsor-blind), randomized, active controlled, parallel-group, multi-center study to evaluate the efficacy and safety of daprodustat compared to recombinant human erythropoietin in subjects with anemia associated with chronic kidney disease who are initiating dialysis

Summary

EudraCT number	2016-000507-86
Trial protocol	ES DE PL GB IT
Global end of trial date	24 September 2020

Results information

Result version number	v1 (current)
This version publication date	08 October 2021
First version publication date	08 October 2021

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 March 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	24 September 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare daprodustat to recombinant human erythropoietin (rhEPO) for hemoglobin (Hgb) efficacy (non-inferiority)

Protection of trial subjects:

Not applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 May 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 54
Country: Number of subjects enrolled	Germany: 5
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Poland: 22
Country: Number of subjects enrolled	Russian Federation: 72

Country: Number of subjects enrolled	United Kingdom: 14
Country: Number of subjects enrolled	Argentina: 56
Country: Number of subjects enrolled	Australia: 7
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	India: 14
Country: Number of subjects enrolled	Korea, Republic of: 22
Country: Number of subjects enrolled	Malaysia: 14
Country: Number of subjects enrolled	Mexico: 20
Worldwide total number of subjects	312
EEA total number of subjects	37

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	229
From 65 to 84 years	81
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

This was a multicenter study conducted across 14 countries. Participants were randomized to receive either Daprodustat or Darbepoetin alfa.

Pre-assignment

Screening details:

A total of 312 participants were randomized in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Daprodustat

Arm description:

Participants received daprodustat film-coated tablets with titrated dose levels ranging from 1, 2, 4, 6, 8, 10, 12, 16, and 24 milligrams (mg) orally once daily for up to 52 weeks. Study treatment was dose-titrated to achieve and maintain hemoglobin (Hgb) in the target range (10 to 11 grams per deciliter [g/dL]).

Arm type	Experimental
Investigational medicinal product name	Daprodustat
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received daprodustat film-coated tablets with dose levels ranging from 1, 2, 4, 6, 8, 10, 12, 16 or 24 mg orally once daily for 52 weeks.

Arm title	Darbepoetin alfa

Arm description:

Participants received darbepoetin alfa as prefilled syringes (PFS) for subcutaneous or intravenous (IV) injection with 4-weekly total dose levels ranging from 20, 30, 40, 60, 80, 120, 160, 200, 300 and 400 microgram (mcg) for 52 weeks. Study treatment was dose-titrated to achieve and maintain Hgb in the target range (10 to 11 g/dL).

Arm type	Active comparator
Investigational medicinal product name	Darbepoetin alfa
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use, Intravenous use

Dosage and administration details:

Participants received darbepoetin alfa as PFS for subcutaneous or IV injection with 4-weekly total dose levels ranging from 20, 30, 40, 60, 80, 120, 160, 200, 300 and 400 mcg for 52 weeks.

Number of subjects in period 1	Daprodustat	Darbepoetin alfa
Started	157	155
Completed	155	151
Not completed	2	4
Consent withdrawn by subject	2	3
Lost to follow-up	-	1

Participants received film-coated tablets of daprodustat 10 mg orally once daily for 52 weeks.	

Primary: Mean Change from Baseline in Hemoglobin (Hgb) During Evaluation Period (Week 28 to Week 52)

End point title	Mean Change from Baseline in Hemoglobin (Hgb) During Evaluation Period (Week 28 to Week 52)
End point description:	
Blood samples were collected from participants for Hgb measurement. Hgb during the evaluation period was defined as the mean of all available post-randomization Hgb values (on and off-treatment) during the evaluation period (Week 28 to Week 52). For the primary analysis missing post-Baseline Hgb values were imputed using pre-specified multiple imputations. Change from Baseline was defined as the average of post-randomization values during the evaluation period minus Baseline value. Baseline was defined as the latest non-missing pre-dose assessment on or before the randomization date. An analysis of covariance (ANCOVA) model including randomization stratification factors Baseline Hgb and treatment was performed to obtain a point estimate and two-sided 95 percent (%) confidence interval (CI) for the treatment difference (daprodustat-darbepoetin alfa). Intent-to-Treat (ITT) Population comprised all randomized participants (who received a treatment randomization number).	

End point type	Primary

End point timeframe:

Baseline (Pre-dose on Day 1) and evaluation period (Week 28 to Week 52)

End point values	Daprodustat	Darbepoetin alfa		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	157[1]	155[2]		
Units: Grams per deciliter				
least squares mean (standard error)	1.02 (± 0.086)	1.12 (± 0.085)		

Notes:

Statistical analyses

Statistical analysis title	Statistical analysis

Statistical analysis description:

An ANCOVA model including randomization stratification factors Baseline Hgb and treatment was performed to obtain a point estimate and two-sided 95% CI for the treatment difference (daprodustat-darbepoetin alfa).

Comparison groups	Daprodustat v Darbepoetin alfa
Number of subjects included in analysis	312
Analysis specification	Pre-specified
Analysis type	non-inferiority[3]
Parameter estimate	Least square (LS) mean difference
Point estimate	-0.1
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.34
upper limit	0.14

Notes:

[3] - Non-inferiority was to be established if the lower limit of the two-sided 95% CI for the treatment difference was greater than the pre-specified non-inferiority margin of -0.75 g/dL.

Secondary: Average Monthly Intravenous Iron Dose (milligrams) from Baseline to Week 52

End point title	Average Monthly Intravenous Iron Dose (milligrams) from Baseline to Week 52

End point description:

Total IV iron dose per participant was calculated from Day 1 to the earliest of (Week 52 visit date, first blood [red blood cells or whole blood] transfusion date and treatment stop date plus [+] 1 day) which corresponds to the time while the participant was on randomized treatment and before receiving a blood transfusion. Average monthly IV iron dose was calculated by Total IV iron dose divided by (/) (the number of days from Day 1 to the earliest of [Week 52 visit date, first blood transfusion date and treatment stop date +1] /30.4375 days). Data for participants until they underwent a red blood cells or whole blood transfusion was included in the analysis. Only those participants with data available at the indicated time points were analyzed.

End point type	Secondary

End point timeframe:

Baseline (Day 1) to Week 52

End point values	Daprodustat	Darbepoetin alfa		
Subject group type	Reporting group	Reporting group

Statistical analyses

Statistical analysis title	Statistical analysis
Statistical analysis description:	
Hodges-Lehmann Estimate of Treatment Difference has been reported.	
Comparison groups	Daprodustat v Darbepoetin alfa
Number of subjects included in analysis	257
Analysis specification	Pre-specified
Analysis type	non-inferiority[21]
Parameter estimate	Median difference (final values)
Point estimate	2.05
Confidence interval	
level	95 %
sides	2-sided
lower limit	-4.45
upper limit	11.27

Notes:

[21] - Non-inferiority was to be established if the lower limit of the two-sided 95% confidence interval for the treatment difference was greater than non-inferiority margin of -15%.

Secondary: Percentage of Time for which Hgb was within the Analysis Range (10 to 11.5 g/dL) During Evaluation Period (Week 28 to Week 52): Superiority analysis

End point title	Percentage of Time for which Hgb was within the Analysis Range (10 to 11.5 g/dL) During Evaluation Period (Week 28 to Week 52): Superiority analysis

End point description:

Percentage of days for which a participant's Hgb was within the analysis range of 10-11.5 g/dL (both inclusive) during the evaluation period (Week 28 to Week 52), including any unscheduled evaluable Hgb values that were taken during this time period was calculated. Percentage of time for which Hgb was within range for a participant was calculated by dividing 'the total number of days that Hgb was within range during Weeks 28 to 52' by 'the total number of days the participant remained on treatment during Weeks 28 to 52'. Only those participants with data available at the indicated time points were analyzed.

End point type	Secondary

End point timeframe:

Weeks 28 to 52

End point values	Daprodustat	Darbepoetin alfa		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	128[22]	129[23]		
Units: Percentage of days				
median (full range (min-max))	57.0 (0.0 to 100.0)	54.7 (0.0 to 100.0)

Statistical analyses

Statistical analysis title	Statistical analysis

Statistical analysis description:

Hazard ratio was estimated using a Cox proportional hazard regression model adjusted for treatment group, dialysis type and dialysis start manner.

Comparison groups	Daprodustat v Darbepoetin alfa
Number of subjects included in analysis	312
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.5348
Method	Wald test
Parameter estimate	Hazard ratio (HR)
Point estimate	1.06
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.31
upper limit	3.66

Secondary: Change from Baseline in Physical Component Score (PCS) using Short Form (SF)-36 Health-related Quality of Life (HRQoL) Questionnaire at Weeks 8, 12, 28, 52

End point title	Change from Baseline in Physical Component Score (PCS) using Short Form (SF)-36 Health-related Quality of Life (HRQoL) Questionnaire at Weeks 8, 12, 28, 52

End point description:

SF-36 acute version2 is 36-item generic quality of life instrument designed to measure participant’s level of performance in following 8 health domains:physical functioning,role-physical(role limitations caused by physical problems),social functioning,bodily pain,mental health,role-emotional(role limitations caused by emotional problems),vitality/general health.Each domain is scored from 0(poorer health) to 100(better health). PCS is average score derived from 4domains(physical functioning,role-physical, bodily pain/general health) representing overall physical health.PCS ranges from 0 to 100;higher scores represent better health.Change from Baseline was calculated as post-dose visit value minus Baseline value.Baseline was defined as latest non-missing pre-dose assessment on or before randomization date. Only those participants with data available at indicated time points were analyzed (represented by n=X in the category titles)

End point type	Secondary

End point timeframe:

Secondary: Change from Baseline in Vitality scores using SF-36 HRQoL Questionnaire at Weeks 28, 52

End point title	Change from Baseline in Vitality scores using SF-36 HRQoL Questionnaire at Weeks 28, 52

End point description:

The SF-36 acute version 2 is a 36-item generic quality of life instrument designed to measure a participant’s level of performance in the following 8 health domains: physical functioning, role-physical (role limitations caused by physical problems), social functioning, bodily pain, mental health, role-emotional (role limitations caused by emotional problems), vitality and general health. Each domain is

scored from 0 (poorer health) to 100 (better health). Vitality ranges from 0 to 100; higher scores represent better health. Change from Baseline was calculated as post-dose visit value minus Baseline value. Baseline was defined as the latest non-missing pre-dose assessment on or before the randomization date. Only those participants with data available at the indicated time points were analyzed (represented by n=X in the category titles).

End point type	Secondary

Statistical analyses

No statistical analyses for this end point

Secondary: Observed concentration at Dosing Interval (Ctau) of Daprodustat (GSK1278863) and its Metabolites GSK2391220 (M2), GSK2506104 (M3), and GSK2531401 (M13)

End point title	Observed concentration at Dosing Interval (Ctau) of Daprodustat (GSK1278863) and its Metabolites GSK2391220 (M2), GSK2506104 (M3), and GSK2531401 (M13)

End point description:

Pharmacokinetic samples were collected at pre-dose, 0.5, 1, 2 and 3 hours post-dose on Week 4 or 8 or 12 for pharmacokinetic analysis of daprodustat (GSK1278863) and its metabolites GSK2391220 (M2), GSK2506104 (M3), and GSK2531401 (M13). GSK2391220, GSK2506104 and GSK2531401 are the metabolites of Daprodustat (GSK1278863). Protocol allowed participants to provide pharmacokinetic samples on Week 4 or 8 or 12. Only those participants with data available at the indicated time points were analyzed. Blood samples were not collected for PK analysis of daprodustat 12, 16 and 24 mg arms.

99999 indicates, Standard deviation could not be calculated for single participant.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality, treatment emergent non-serious adverse events and serious adverse events were collected up to follow-up visit (Week 58)

Adverse event reporting additional description:

Safety Population comprised of all randomized participants who received at least one dose of randomized treatment.

Assessment type	Systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	23.1

Reporting groups

Reporting group title	Daprodustat

Reporting group description:

Participants received daprodustat film-coated tablets with titrated dose levels ranging from 1, 2, 4, 6, 8, 10, 12, 16, and 24 milligrams (mg) orally once daily for up to 52 weeks. Study treatment was dose-titrated to achieve and maintain hemoglobin in the target range (10 to 11 grams per deciliter [g/dL]).

Reporting group title	Darbepoetin alfa

Reporting group description:

Participants received darbepoetin alfa as prefilled syringes (PFS) for subcutaneous or intravenous (IV) injection with 4-weekly total dose levels ranging from 20, 30, 40, 60, 80, 120, 160, 200, 300 and 400 microgram (mcg) for 52 weeks. Study treatment was dose-titrated to achieve and maintain hemoglobin in the target range (10 to 11 g/dL).

occurrences (all)	12	9	
Catheter site infection			
subjects affected / exposed	5 / 157 (3.18%)	8 / 155 (5.16%)	

occurrences (all)	5	11	
Upper respiratory tract infection			
subjects affected / exposed	7 / 157 (4.46%)	11 / 155 (7.10%)	
occurrences (all)	9	12	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 October 2017	Amendment 1: Updated time period of planning to start dialysis from the screening to 6 weeks, when appropriate; Removed number of screening participants and stated only an approximate number of randomized participants required; Modified PD inclusion criteria to allow participants on >=4 times/week PD including an incremental schedule; Removed France country specific requirement for Informed Consent process from inclusion criteria; Broadened exclusion to include participation in an interventional study with an investigational agent or device; Removed option to have Early Treatment Discontinuation visit supersede the scheduled visit; Added a provision that in unexpected circumstances where the supply to the site is interrupted, local SOC for anemia management during this time period may be considered; Added direction regarding randomized treatment and study continuation for participants who will be away from the research site for an extended period of time; Added new darbepoetin alfa dose strengths (not available in all countries); Clarified timeframe for iron management criteria; Clarified timing of designated study visits for participants who have not yet initiated dialysis and for participants on dialysis; Shortened visit window for week 2 and 4; Changed time point for blinded data cut need for psychometric validation of the CKD Questionnaire; Revised statistical section to change from 2-sided testing at the 5% level to 1-sided testing at the 2.5% level; for secondary endpoints, to change significance levels to p-values and to correct the time point for various PRO;Provision for possible adjustment to the Dose Adjustment Algorithm triggers for Hgb values 7.5 grams per deciliter (g/dL) to <9.5 g/dL based on review of blinded instream Hgb data; Updated FSH level to confirm menopause in Appendix 5, Female Eligibility Criteria

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
