Clinical trial results:
An open label multicenter Phase Ib/II trial to determine the dose of BI 836826 in combination with gemcitabine and oxaliplatin (GemOx) and the efficacy of BI 836826-GemOx versus rituximab (R)- GemOx (R-GemOx) in patients with relapsed/ refractory diffuse large B-cell lymphoma (DLBCL) who are not eligible for, or have relapsed/progressed after autologous/allogeneic stem cell transplant

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 June 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 March 2018
Global end of trial reached?	Yes
Global end of trial date	16 March 2018
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main objective of Phase Ib of the trial was to investigate the maximum tolerated dose (MTD), safety and tolerability, pharmacokinetics (PK), and preliminary efficacy of BI 836826 in combination with GemOx in patients with relapsed/refractory diffuse large B-cell lymphoma (DLBCL).

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 January 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Italy: 20
Country: Number of subjects enrolled	Spain: 14
Worldwide total number of subjects	35
EEA total number of subjects	35

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	22
From 65 to 84 years	12
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

This trial was designed to consist of 2 parts. First part was an open-label, non-randomised, Phase Ib dose-escalation trial according to a standard 3+3 design to determine the maximum tolerated dose (MTD) of BI 836286 in combination with gemcitabine and oxaliplatin. Second part of the trial, an open-label randomised Phase II, was not conducted.

Pre-assignment

Screening details:

All patients were screened for eligibility to participate in the trial. Patients attended specialist sites which would then ensure that they (the patients) met all inclusion/exclusion criteria. Patients were not to be randomized to trial treatment if any one of the specific entry criteria were violated.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Open label trial

Arms

Are arms mutually exclusive?	Yes
Arm title	BI 836826 25 milligram (mg) + GemOx

Arm description:

Patients were administered (intravenous infusion) BI 836826 25 mg on Day 8 and GemOx (gemcitabine 1000 mg/metre square (m^2) plus oxaliplatin 100 mg/m^2) on Day 1 (up to 6 cycles of treatment); the duration of each cycle was 14 days.

Arm type	Experimental
Investigational medicinal product name	BI 836826
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Patients were administered (intravenous infusion) BI 836826 25 mg on Day 8 and GemOx (gemcitabine 1000
mg/metre square (m^2) plus oxaliplatin 100 mg/m^2) on Day 1 (up to 6 cycles of treatment); the duration of
each cycle was 14 days.

Investigational medicinal product name	Oxaliplatin

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 October 2016	- Biochemistry test was added on Day 1 of Cycle 1 on request of Belgian health authority - Other changes were made to make the protocol more clear, correct some mistakes, as well as add consistency and clarity
03 November 2016	- Weight assessment was moved to End of Treatment Visit because of an error in a previous version of the Clinical trial Protocol (CTP) - Regular Hepatitis B Virus (HBV) Deoxyribonucleic Acid (DNA) tests were required in case a patient was positive for Hepatitis B surface antigen (HBsAg) or anti- HBc at screening
10 January 2017	A clarification was added that the MTD can only be determined based on 'evaluable' patients
09 June 2017	- Two additional dose cohorts (150 and 200 mg) were added - Six to 9 patients were to be recruited at the established MTD to have a total of 12 patients treated at this MTD
14 September 2017	Inclusion criterion 4 was changed to allow patients with 1 large single lesion to participate to the trial

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Because of discontinuation of BI 836826 programme, Phase II of the trial and PK analysis in Phase Ib were not conducted.

Notes:
