General information about the trial

Main objective of the trial:

The primary phase 1 objective of the study was to determine both the maximum tolerated dose (MTD) and recommended phase 2 dose (RP2D) of intermittent and continuous linsitinib in combination with weekly paclitaxel in patients with advanced solid tumors. The primary objective of the phase 2 portion of this study was to determine progression-free survival (PFS) evaluated by the investigator of 2 different schedules of linsitinib (Arm A and Arm B) in combination with weekly paclitaxel as compared with paclitaxel alone (Arm C) in recurrent/refractory ovarian cancer patients.

Protection of trial subjects:

This clinical study was written, conducted and reported in accordance with the protocol, ICH GCP Guidelines, and applicable local regulations, including the European Directive 2001/20/EC, on the protection of human rights, and with the ethical principles that have their origin in the Declaration of Helsinki. Astellas ensures that the use and disclosure of protected health information (PHI) obtained during a research study complies with the federal, national and/or regional legislation related to the privacy and protection of personal information.

Arms

Are arms mutually exclusive?	Yes
Arm title	Phase 1 Arm A- Intermittent OSI-906 300 mg QD with paclitaxel

Arm description:

Phase 1, Arm A – Intermittent OSI-906 300 mg quaque die (QD) (once daily) on Days 1 – 3, 8 – 10, and 15 – 17 with paclitaxel on Days 1, 8, and 15 (except Treatment Period 1 (TP 1); in TP 1 OSI-906 on Days 1 – 3, 8 –10, 15 – 17, and 22 – 24 with paclitaxel on Days 8, 15, and 22). The starting dose of intermittent linsitinib was 300 mg daily on days 1 to 3 every 7 days. The planned starting dose of paclitaxel was 80 mg/m^2 intravenously.

Arm type	Experimental
Investigational medicinal product name	OSI-906
Investigational medicinal product code	ASP7487
Other name	Linsitinib
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

The Sponsor supplied OSI-906/linsitinib as tablets. Linsitinib was to be taken with food and up to 200 mL of water. Patients were instructed to take the correct number of linsitinib tablets corresponding to the dose level to which they were enrolled. For phase 1 Arm A –Intermittent OSI-906 QD on Days 1 – 3, 8 – 10, and 15 – 17 (except Treatment Period 1 (TP 1); in TP 1 OSI-906 on Days 1 – 3, 8 –10, 15 – 17, and 22 – 24. The starting dose of intermittent linsitinib was 300 mg daily on days 1 to 3 every 7 days. Doses were to be taken at approximately the same time each day and at regular intervals (approximately every 12 hours). If a patient missed a dose of linsitinib, the missed dose should not have been taken with the subsequent dose. The patient was allowed to take the dose any time during that same day for intermittent schedule.

Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Weekly paclitaxel was to be administered as an intravenous formulation over a 1-hour period according to institution practice. All patients were to receive paclitaxel premedication as per local practices. For phase 1, all A Arms, paclitaxel was given on Days 1, 8, and 15 (except Treatment Period 1 (TP 1); in TP

1, paclitaxel was given on Days 8, 15, and 22). On days when both study drugs were co-administered (linsitinib and paclitaxel), the linsitinib dose was to be taken 2 hours prior to initiating the paclitaxel infusion. Paclitaxel was administered on day 8 (not on day 1) for the first treatment period only in order to obtain single-agent pharmacokinetics for linsitinib and to assess any potential drug-drug interaction. The planned starting dose of paclitaxel was 80 mg/m^2 intravenously, which was considered an acceptable standard based on available literature for the weekly administration of paclitaxel.

Arm title	Phase 1 Arm A- Intermittent OSI-906 400 mg QD with paclitaxel

Subject analysis set type	Full analysis

Subject analysis set description:

The MTD Determination Analysis Set (MTDSET) was defined as all patients who were considered fully evaluable for assessment of Dose-limiting toxicity (DLT) or experienced DLTs. Patients who required a dose interruption or reduction during the initial 28-day treatment period remained evaluable for MTD determination if the reason for the reduction and/or interruption represented a DLT. A standard 3+3 dose escalation scheme was used. The dose-limiting toxicities were listed for the MTD determining patients. Patients were treated in either the intermittent or continuous linsitinib (in combination with weekly paclitaxel) arm.

Adverse events information

Timeframe for reporting adverse events:

A Treatment Emergent Adverse Event (TEAE) was defined as any adverse event (i.e., a new event or an exacerbation of a pre-existing condition) that occurred after the patient was enrolled and up to 30 days after the last study drug administration.

Adverse event reporting additional description:

An adverse event (AE) or adverse experience was defined as any untoward medical occurrence in a study patient who was administered a study drug that did not necessarily have a causal relationship with this treatment. All of the AEs with an onset date after the first dose of linsitinib for Arm C patients were considered as treatment emergent.
