Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001976-PIP02-18
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 September 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	09 July 2020
Global end of trial reached?	Yes
Global end of trial date	09 July 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Main objective of the study was to assess the pharmacokinetic (PK) profile of velsecorat (AZD7594) at steady state in adolescent subjects with asthma.

Protection of trial subjects:

The study protocol and all protocol amendments, all versions of the informed consent form (ICFs) and any other written information and/or materials provided to the subjects were submitted to an institutional review board (IRB) by the Investigator and approved by an IRB in writing before the study was initiated. This study was performed in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH)/ Good Clinical Practice (GCP), applicable regulatory requirements and the AstraZeneca policy on Bioethics. The Principal Investigator (PI) at each site ensured that subjects and their legally authorised representative, defined as their parents/legal guardians (caregiver), were given full and adequate oral and written information about the nature, purpose, possible benefit and risk of the study. The PI also notified subjects and caregivers that they were free to withdraw from the study at any time. The PI gave the subjects and caregivers the opportunity to ask questions and time to consider the information provided. Subjects and their legally authorised representatives were required to sign a statement of assent or informed consent, respectively, that met the requirements of 21 CFR 50, local regulations, ICH guidelines, Health Insurance Portability and Accountability Act requirements, where applicable, and the IRB or study centre.

Subject disposition

Recruitment

Recruitment details:

The study was conducted in 10 centres across United States from 24-Jul-2019 to 9-Jul-2020.

Pre-assignment

Screening details:

Total 59 subjects were screened, 12 subjects were screen failed before entering the wash-out period and 11 subjects were screen failed after having entered the wash-out period. Finally 36 subjects entered the Treatment period and received velsecorat.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	12-14 years

Arm description:

Subjects received oral inhalation of velsecorat (360 µg, delivered dose, via dry powder inhaler [DPI]) once daily for 15 to 16 days.

Arm type	Experimental
Investigational medicinal product name	Velsecorat
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Oral use

Dosage and administration details:

Oral inhalation of velsecorat (360 µg [delivered dose], via dry powder inhaler [DPI]) once daily multiple-dose for 15 to 16 days. One inhalation per day at the same time (± 30 minutes) every day.

Arm title	15-17 years
------------------	-------------

Arm description:

Subjects received oral inhalation of velsecorat (360 µg, delivered dose, via DPI) once daily for 15 to 16 days.

Arm type	Experimental
Investigational medicinal product name	Velsecorat
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Oral use

Dosage and administration details:

Oral inhalation of velsecorat (360 µg [delivered dose], via DPI) once daily multiple-dose for 15 to 16 days. One inhalation per day at the same time (± 30 minutes) every day.

Secondary: Change from baseline in morning trough forced expiratory volume in 1 second (FEV1) on Day 15

End point title	Change from baseline in morning trough forced expiratory volume in 1 second (FEV1) on Day 15
-----------------	--

End point description:

To evaluate the PD of velsecorat following daily inhalations for 2 weeks in adolescent subjects with asthma. Baseline was defined as the mean of the two measured values before first study drug administration (-45 minutes and -15 minutes) on Day 1 and trough value was defined as the mean of the two measurements 30 minutes apart (23 hours after last dose) pre-dose on Day 15. This could be performed either at home (or other safe location of the subject's choice) or at the study site. Safety analysis set was used to evaluate this endpoint, which included all subjects who took at least 1 dose of velsecorat.

Secondary: Change from baseline in asthma control questionnaire (ACQ-5) on Day 15

End point title	Change from baseline in asthma control questionnaire (ACQ-5) on Day 15
-----------------	--

End point description:

To evaluate the PD of velsecorat following daily inhalations for 2 weeks in adolescent subjects with asthma. Baseline and Day 15 ACQ-5 scores were defined as the mean of the five question responses collected before velsecorat administration at each of Day 1 and Day 15, respectively. Change from baseline was defined as the Day 15 score minus baseline score. The validated ACQ-5 measures both the adequacy of asthma control and changes in asthma control. The questionnaire had 5 items; each item is scored on a scale of 0 to 6, where lower scores corresponds better asthma control and higher scores represents more severe impairment/symptoms. Safety analysis set was used to evaluate this endpoint, which included all subjects who took at least 1 dose of velsecorat.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 October 2019	Inclusion criteria #3 and #7 updated to clarify that asthma treatment may be daily or intermittently, and to adjust the body mass index inclusion restriction to above the 5th percentile rather than within the 5th and 95th percentile. and exclusion criteria #1, #3 and #4 were updated to exclude subjects with severe obesity including weight-related health problems, and to extend ECG screening exclusion criteria from Visit 1 to Visit 1 or pre-dose Visit 4.
22 April 2020	Removal of reversibility criteria. Deletion of Visit 2. A window of +10 minutes added for the 30-minute post-dose ECG only. Text added allowing subjects to choose an alternate safe location for home nursing visits. Inclusion criterion #3 updated and included that the subject must have used the monotherapy at least once in the 3 months prior to screening. Screen failures section revised to allow re-screening of screen failure subjects due to not meeting reversibility criteria. Section of sample size determination was revised to increase the flexibility, that 24 eligible subjects should include 11 to 13 subjects in each age group was removed. Addition that ECG collection timing was to occur prior to vital signs when these assessments were performed at the same time. Requirement that the 24 eligible subjects should include 11 to 13 subjects in each age group was removed. Changes made to clarify PK and PD set.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
24 March 2020	Due to the COVID-19 pandemic further screening was paused in the trial, while ongoing subjects were allowed to continue until study completion. Based on velsecorat safety profile and the mild asthmatic subject population it was deemed safe to re-start screening again on 23-Apr-2020.	23 April 2020

Notes:

Limitations and caveats
