

## Clinical trial results:

**A randomized, double-blind, placebo-controlled, study evaluating the efficacy and safety of otilimab in patients with severe pulmonary COVID-19 related disease**

### Summary

EudraCT number	2020-001759-42
Trial protocol	GB NL ES BE DE IT
Global end of trial date	16 August 2021

### Results information

Result version number	v1 (current)
This version publication date	16 March 2022
First version publication date	16 March 2022

### Trial information

#### Trial identification

Sponsor protocol code	214094
-----------------------	--------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	GlaxoSmithKline
Sponsor organisation address	980 Great West Road, Brentford, Middlesex, United Kingdom, TW8 9GS
Public contact	GSK Response Center, GlaxoSmithKline, 1 8664357343, GSKClinicalSupportHD@gsk.com
Scientific contact	GSK Response Center, GlaxoSmithKline, 1 8664357343, GSKClinicalSupportHD@gsk.com

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

### Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 September 2021

Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	16 August 2021
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To compare the efficacy of otilimab intravenous (IV) versus placebo

Protection of trial subjects:

Not Applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 May 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 102
Country: Number of subjects enrolled	Belgium: 21
Country: Number of subjects enrolled	Brazil: 31
Country: Number of subjects enrolled	Canada: 19
Country: Number of subjects enrolled	Chile: 11
Country: Number of subjects enrolled	Colombia: 1
Country: Number of subjects enrolled	France: 258
Country: Number of subjects enrolled	India: 72
Country: Number of subjects enrolled	Italy: 7
Country: Number of subjects enrolled	Japan: 48
Country: Number of subjects enrolled	Mexico: 48
Country: Number of subjects enrolled	Netherlands: 47
Country: Number of subjects enrolled	Peru: 12
Country: Number of subjects enrolled	Poland: 12
Country: Number of subjects enrolled	Russian Federation: 113
Country: Number of subjects enrolled	South Africa: 36
Country: Number of subjects enrolled	Spain: 94
Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	United States: 214
Worldwide total number of subjects	1156
EEA total number of subjects	439

Notes:

### Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	499
From 65 to 84 years	643
85 years and over	14

## Subject disposition

### Recruitment

Recruitment details:

This was a 2-part study evaluating efficacy and safety of intravenously (IV) administered otilimab in participants with severe pulmonary Coronavirus Disease-2019 (COVID-19) related disease. Part 1 consisted of participants aged 18 to 79 years and Part 2 consisted of participants aged 70 years and older.

### Pre-assignment

Screening details:

A total of 1156 (806 in Part 1 and 350 in Part 2) participants were enrolled in the study (Enrolled Population: All participants who entered the study).

### Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Part 1: Placebo 1

Arm description:

Participants between the ages of greater than or equal to ( $\geq$ )18 years and less than or equal to ( $\leq$ )79 years received blinded 1-hour IV infusion of placebo (sterile 0.9 percent [%] weight by volume [w/v] sodium chloride solution) once along with standard of care.

Arm type	Placebo
Investigational medicinal product name	Placebo 1
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Sterile 0.9% (w/v) sodium chloride solution administered once via IV infusion

<b>Arm title</b>	Part 1: Otilimab 90 mg
------------------	------------------------

Arm description:

Participants between the ages of  $\geq$ 18 years and  $\leq$ 79 years received blinded otilimab 90 milligrams (mg) (solution in single-use vial diluted in sterile 0.9% w/v sodium chloride solution) once as 1-hour IV infusion along with standard of care.

Arm type	Experimental
Investigational medicinal product name	Otilimab 90 mg (diluted in sodium chloride solution)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Solution in single-use vial (150 mg/milliliters [mL]) diluted in sterile 0.9% (w/v) sodium chloride solution and administered once via IV infusion

<b>Arm title</b>	Part 2: Placebo 2
------------------	-------------------

Arm description:

Participants aged 70 years or above received blinded 1-hour IV infusion of placebo (sterile 5% w/v dextrose solution) once along with standard of care.

Arm type	Placebo
Investigational medicinal product name	Placebo 2
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Sterile 5% (w/v) dextrose solution administered once via IV infusion

<b>Arm title</b>	Part 2: Otilimab 90 mg
------------------	------------------------

Arm description:

Participants aged 70 years or above received blinded otilimab 90 mg (solution in single-use vial diluted in sterile 5% dextrose solution) once as 1-hour IV infusion along with standard of care.

Arm type	Experimental
Investigational medicinal product name	Otilimab 90 mg (diluted in dextrose solution)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Solution in single-use vial (150 mg/mL) diluted in sterile 5% (w/v) dextrose solution and administered once via IV infusion

<b>Number of subjects in period 1</b>	Part 1: Placebo 1	Part 1: Otilimab 90 mg	Part 2: Placebo 2
Started	403	403	175
Completed	388	379	170
Not completed	15	24	5
Protocol deviation	2	3	-
Physician decision	2	5	1
Consent withdrawn by subject	7	8	1
Lost to follow-up	4	8	3

<b>Number of subjects in period 1</b>	Part 2: Otilimab 90 mg
Started	175
Completed	171
Not completed	4
Protocol deviation	-
Physician decision	1
Consent withdrawn by subject	1
Lost to follow-up	2

## Baseline characteristics

### Reporting groups

Reporting group title	Part 1: Placebo 1
Reporting group description:	
Participants between the ages of greater than or equal to ( $\geq$ )18 years and less than or equal to ( $\leq$ )79 years received blinded 1-hour IV infusion of placebo (sterile 0.9 percent [%] weight by volume [w/v] sodium chloride solution) once along with standard of care.	
Reporting group title	Part 1: Otilimab 90 mg
Reporting group description:	
Participants between the ages of $\geq$ 18 years and $\leq$ 79 years received blinded otilimab 90 milligrams (mg) (solution in single-use vial diluted in sterile 0.9% w/v sodium chloride solution) once as 1-hour IV infusion along with standard of care.	
Reporting group title	Part 2: Placebo 2
Reporting group description:	
Participants aged 70 years or above received blinded 1-hour IV infusion of placebo (sterile 5% w/v dextrose solution) once along with standard of care.	
Reporting group title	Part 2: Otilimab 90 mg
Reporting group description:	
Participants aged 70 years or above received blinded otilimab 90 mg (solution in single-use vial diluted in sterile 5% dextrose solution) once as 1-hour IV infusion along with standard of care.	

Reporting group values	Part 1: Placebo 1	Part 1: Otilimab 90 mg	Part 2: Placebo 2

## End points

### End points reporting groups

Reporting group title	Part 1: Placebo 1
Reporting group description: Participants between the ages of greater than or equal to ( $\geq$ )18 years and less than or equal to ( $\leq$ )79 years received blinded 1-hour IV infusion of placebo (sterile 0.9 percent [%] weight by volume [w/v] sodium chloride solution) once along with standard of care.	
Reporting group title	Part 1: Otilimab 90 mg
Reporting group description: Participants between the ages of $\geq$ 18 years and $\leq$ 79 years received blinded otilimab 90 milligrams (mg) (solution in single-use vial diluted in sterile 0.9% w/v sodium chloride solution) once as 1-hour IV infusion along with standard of care.	
Reporting group title	Part 2: Placebo 2
Reporting group description: Participants aged 70 years or above received blinded 1-hour IV infusion of placebo (sterile 5% w/v dextrose solution) once along with standard of care.	
Reporting group title	Part 2: Otilimab 90 mg
Reporting group description: Participants aged 70 years or above received blinded otilimab 90 mg (solution in single-use vial diluted in sterile 5% dextrose solution) once as 1-hour IV infusion along with standard of care.	

### Primary: Part 1: Percentage of participants alive and free of respiratory failure at Day 28

End point title	Part 1: Percentage of participants alive and free of respiratory failure at Day 28 <sup>[1]</sup>
End point description: Participants were considered alive and free of respiratory failure if they were in category 1,2,3 or 4 from the GSK modified version ordinal scale adapted from World Health Organization (WHO) scale 2020. The 8-point scale was as follows: 1) Non-hospitalized, no limitation of activity; 2) Non-hospitalized, limitation of activity; 3) Hospitalized, no oxygen therapy; 4) Hospitalized, low-flow oxygen by mask/nasal prongs; 5) Hospitalized, highflow oxygen ( $\geq$ 15 liters per minute), continuous positive airway pressure (CPAP), bilevel positive airway pressure (BIPAP), non-invasive ventilation; 6) Hospitalized, intubation and mechanical ventilation; 7) Hospitalized, mechanical ventilation plus additional organ support; 8) Death. Higher scale indicate higher intensity of respiratory failure. Percentage values are rounded off. Modified intent to treat (mITT) population consisted of all randomized participants who received study intervention. Only those participants with data available at specified timepoints were analyzed	
End point type	Primary
End point timeframe: At Day 28	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The endpoints are described part-wise; whereas the Baseline characteristics are for overall study.

End point values	Part 1: Placebo 1	Part 1: Otilimab 90 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	393 <sup>[2]</sup>	389 <sup>[3]</sup>		
Units: Percentage of participants	67	71		

Notes:

[2] - mITT Population

**Statistical analyses**

<b>Statistical analysis title</b>	Statistical analysis 1
Statistical analysis description:	
Analysis performed using logistic regression adjusted for treatment, and both clinical status at Baseline and age group as randomized. Missing data was imputed with monotone discriminant multiple imputation assuming data is missing at random.	
Comparison groups	Part 1: Placebo 1 v Part 1: Otilimab 90 mg
Number of subjects included in analysis	782
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.0456 <sup>[4]</sup>
Method	Regression, Logistic
Parameter estimate	Odds ratio (OR)
Point estimate	1.32
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.96
upper limit	1.82

Notes:

[4] - p-value is from a one-sided test.

**Primary: Part 2: Percentage of participants alive and free of respiratory failure at Day 28**

End point title	Part 2: Percentage of participants alive and free of respiratory failure at Day 28 <sup>[5]</sup>
End point description:	
Participants were alive and free of respiratory failure if they were in category 1, 2, 3 or 4 from the GlaxoSmithKline (GSK) modified version ordinal scale adapted from World Health Organization (WHO) scale 2020. The 8-point scale was as follows: 1) Non-hospitalized, no limitation of activity; 2) Non-hospitalized, limitation of activity; 3) Hospitalized, no oxygen therapy; 4) Hospitalized, low-flow oxygen by mask or nasal prongs; 5) Hospitalized, highflow oxygen ( $\geq 15$ L/min), continuous positive airway pressure (CPAP), bilevel positive airway pressure (BIPAP), non-invasive ventilation; 6) Hospitalized, intubation and mechanical ventilation; 7) Hospitalized, mechanical ventilation plus additional organ support; 8) Death. Higher scale indicates higher intensity of respiratory failure. Percentage values are rounded off. Only those participants with data available at the specified time points were analyzed.	
End point type	Primary

## Secondary: Part 1: Time to final ICU discharge

End point title	Part 1: Time to final ICU discharge <sup>[121]</sup>
-----------------	--

End point description:

Time to final ICU discharge was defined as the time from dosing to when the participant is discharged from the ICU for the last time up to (and including) Day 28. mITT Population admitted to ICU at Baseline comprised of those participants in mITT who were admitted to ICU at Baseline. Median and inter-quartile range (first quartile and third quartile) of time to final ICU discharge is presented. Only those participants with data available at the specified time points were analyzed. 99999 indicates that <75% of participants experienced the event within the treatment arm. Hence, third-quartile could not be derived.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to Day 28

Notes:

[121] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoints are described part-wise; whereas the Baseline characteristics are for overall study.

<b>End point values</b>	Part 1: Placebo 1	Part 1: Otilimab 90 mg

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All-cause mortality, SAEs, and non-SAEs were collected up to Day 60 in Part 1 and 2 of the study

Adverse event reporting additional description:

SAEs and non-serious AEs were reported for Safety Population (all participants who received study intervention). All-cause mortality was reported for Enrolled population(all participants who entered the study).Sixteen participants from Enrolled Population(N=1156) did not receive study treatment, hence were not included in Safety Population(N=1140)

Assessment type	Systematic

### Reporting groups

Reporting group title	Part 1: Placebo 1
-----------------------	-------------------

Reporting group description:

Participants between the ages of greater than or equal to ( $\geq$ )18 years and less than or equal to ( $\leq$ )79 years received blinded 1-hour IV infusion of placebo (sterile 0.9 percent [%] weight by volume [w/v] sodium chloride solution) once along with standard of care.

Reporting group title	Part 1: Otilimab 90 mg
-----------------------	------------------------

Reporting group description:

Participants between the ages of  $\geq$ 18 years and  $\leq$ 79 years received blinded otilimab 90 milligrams (mg) (solution in single-use vial diluted in sterile 0.9% w/v sodium chloride solution) once as 1-hour IV infusion along with standard of care.

Reporting group title	Part 2: Placebo 2
-----------------------	-------------------

Reporting group description:

Participants aged 70 years or above received blinded 1-hour IV infusion of placebo (sterile 5% w/v dextrose solution) once along with standard of care.

Reporting group title	Part 2: Otilimab 90 mg
-----------------------	------------------------

Reporting group description:

Participants aged 70 years or above received blinded otilimab 90 mg (solution in single-use vial diluted in sterile 5% dextrose solution) once as 1-hour IV infusion along with standard of care.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 May 2020	Amendment 1: Modifications to the protocol in response to regulatory feedback, and clarifications based on investigator feedback. The key change is revision of the primary endpoint (where definition of "free of respiratory failure" is participants in categories 1-4 on GlaxoSmithKline [GSK] Ordinal Scale). Other changes are (1) to revise recording of blood pressure and pulse rate; (2) to add details of randomization caps; (3) to simplify/clarify some Inclusion and Exclusion Criteria; (4) to clarify medications permitted during the study.
02 July 2020	Amendment 2: Modifications to the protocol in response to regulatory and ethics committee feedback, and clarifications based on investigator feedback. The main changes are (1) clarification that Day 1 pre-dose assessments do not need to be repeated if Screening and Randomization are within 24 hours; (2) expedited reporting of cytokine release syndrome (CRS) as an adverse event of special interest (AESI); (3) clarification that organ transplant participants are excluded per Exclusion Criteria #11; (4) clarification of conditions by which convalescent plasma is permitted or not during the study; (5) removed specific mention of chloroquine and hydroxychloroquine; (6) expanded the null hypothesis; (7) consent may be collected before the 48hour screening window.
25 January 2021	Amendment 3: Before the last of 806 participants completed the study (Last Subject Last Visit, Day 60), an interim analysis of the primary endpoint and all-cause mortality data at Day 28 showed that substantial clinical benefit was evident in one of the pre-defined stratification subgroups "Age 70 to less than (<)80 years", with no safety concerns in any subgroup. Given the ongoing pandemic and particularly high mortality of Coronavirus Disease-2019 (COVID-19) disease in participants over 70 years old, together with recent publications that support the hypothesis that the severity of the disease is driven by a maladaptive innate immune response in which Granulocyte-macrophage colony stimulating factor (GM-CSF) plays a key role and which is more commonly elevated in older participants. GSK has therefore determined to urgently confirm these subgroup findings by amending the protocol to allow the enrolment of an additional cohort of participants aged 70 years and above with no upper age limit. GSK has reviewed the results from what is now considered as the first part of the study (Part 1) and decided that a second part will be added to the study (Part 2) which has less frequent assessments to decrease the burden on sites

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
