

Clinical trial results:

A Phase IV, 12 week, randomised, double-blind, double-dummy study to compare single inhaler triple therapy, fluticasone furoate/umeclidinium/vilanterol (FF/UMEC/VI), with tiotropium monotherapy based on lung function and symptoms in participants with chronic obstructive pulmonary disease

Summary

EudraCT number	2017-001190-16

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 September 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 July 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effect of single inhaler triple therapy (FF/UMEC/VI) compared to Tiotropium after 12 weeks of treatment on lung function

Protection of trial subjects:

NA

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 March 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 400
Country: Number of subjects enrolled	Russian Federation: 198
Country: Number of subjects enrolled	United States: 202
Worldwide total number of subjects	800
EEA total number of subjects	400

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	321
From 65 to 84 years	473
85 years and over	6

Subject disposition

Recruitment

Recruitment details:

This was a randomized, multicenter, parallel group study where participants with chronic obstructive pulmonary disease (COPD) were randomized to receive either fluticasone furoate/umeclidinium/vilanterol or tiotropium in a 1:1 ratio. The study was conducted across 68 centers in 3 countries.

Pre-assignment

Screening details:

A total of 1049 participants were screened, of which 179 failed screening. Total of 870 participants entered in run-in period, of which 70 were run-in failures. Total of 800 participants were enrolled and randomized.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Fluticasone furoate/umeclidinium/vilanterol 100/62.5/25 mcg

Arm description:

Participants received fluticasone furoate/umeclidinium/vilanterol (FF/UMEC/VI) 100/62.5/25 microgram (mcg) via the ELLIPTA (once daily in the morning) plus placebo to match tiotropium (TIO) via HandiHaler (once daily in the morning) for 84 days. Participants received albuterol/salbutamol as rescue medication via metered dose inhaler (MDI) during conduct of the study, if required.

Arm type	Experimental
Investigational medicinal product name	Fluticasone furoate/Umeclidinium/Vilanterol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder, pre-dispensed
Routes of administration	Inhalation use

Dosage and administration details:

Fluticasone furoate/Umeclidinium/Vilanterol (100/62.5/25 mcg) was available as dry white powder to be administered via ELLIPTA once daily in the morning.

Investigational medicinal product name	Placebo matching Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder, hard capsule
Routes of administration	Inhalation use

Dosage and administration details:

Placebo matching tiotropium was available as hard gelatin capsule containing lactose. Participants received placebo matching tiotropium once daily in the morning via HandiHaler device.

Investigational medicinal product name	Albuterol/salbutamol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Participants received short acting Albuterol/Salbutamol as rescue medication during the study period, if required.

Arm title	Tiotropium 18 mcg
------------------	-------------------

Arm description:

Participants received tiotropium 18 mcg via HandiHaler (once daily in the morning) plus placebo to match fluticasone furoate/umeclidinium/vilanterol via the ELLIPTA (once daily in the morning) for 84 days. Participants received albuterol/salbutamol as rescue medication via MDI during conduct of the study, if required.

Arm type	Active comparator
Investigational medicinal product name	Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder, hard capsule
Routes of administration	Inhalation use

Dosage and administration details:

Tiotropium was available as a hard gelatin capsule containing 18 mcg of tiotropium bromide blended with lactose. Participants received tiotropium (18 mcg) once daily in the morning via HandiHaler device.

Investigational medicinal product name	Placebo to match Fluticasone furoate/Umeclidinium/Vilanterol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder, pre-dispensed
Routes of administration	Inhalation use

Dosage and administration details:

Placebo matching Fluticasone furoate/Umeclidinium/Vilanterol was available as dry white powder to be administered via ELLIPTA once daily in the morning.

Investigational medicinal product name	Albuterol/salbutamol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Participants received short acting Albuterol/Salbutamol as rescue medication during the study period, if required.

Number of subjects in period 1	Fluticasone furoate/umeclidinium/vilanterol 100/62.5/25 mcg	Tiotropium 18 mcg

Primary: Change from Baseline in trough forced expiratory volume in 1 second (FEV1) on Day 85

End point title	Change from Baseline in trough forced expiratory volume in 1 second (FEV1) on Day 85
End point description:	
FEV1 is a measure of lung function and is defined as the maximal amount of air that can be forcefully exhaled in one second. Trough FEV1 on Day 85 was defined as the mean of the two planned spirometry FEV1 measurements. Change from Baseline in trough FEV1 on Day 85 was calculated by subtracting Baseline FEV1 value from the trough FEV1 value on Day 85. Baseline FEV1 was defined as the mean of the two assessments made at 30 and 5 minutes pre-dose on Day 1. Intent-To-Treat (ITT) Population comprised of all randomized participants, excluding those who were randomized in error. Only those participants with data available at the specified time point were analyzed.	
End point type	Primary
End point timeframe:	
Baseline (Day 1 [Pre-dose at 30 minutes and 5 minutes]) and Day 85

-----------------	---

End point description:

An AE is any untoward medical occurrence in a clinical study participant, temporally associated with the use of a study treatment, whether or not considered related to the study treatment. Any untoward event resulting in death, life threatening, requires hospitalization or prolongation of existing hospitalization, results in disability/incapacity, congenital anomaly/birth defect or any other important medical event according to medical or scientific judgement was categorized as SAE. Non-SAEs and SAEs were presented for all randomized participants excluding one participant in ITT population who was randomized correctly to "Tiotropium 18 mcg" arm but did not take any randomized study treatment due to withdrawal of consent.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 July 2018	This amendment was required to update the QT interval corrected for heart rate (QTc) stopping criteria to that which was used in the Phase III Trelegy registration studies. In addition, a section describing Smoking Cessation Counselling has been added as does a corresponding assessment at the end of study (Visit 4). Clarified that run-in treatment should be collected at Visit 2, study treatment at Visit 3, and albuterol/salbutamol at Visit 5. Also, wording regarding suggested order for assessments and procedures has been added to the end of the Schedule of Activities section. Removed reference to Fridericia formula in calculation of QTc. Clarification regarding collecting the COPD Assessment Test (CAT) assessment questionnaire prior to the St. George's Respiratory Questionnaire for COPD participants (SGRQ-C) has also been provided along with clarification that vital signs should be collected before the electrocardiogram (ECG) and prior to spirometry. Also added clarification that CAT and SGRQ-C should be collected at Visit 3 to mirror the Schedule of Activities (SoA). Corrected reporting time regarding pregnancy. Finally, added wording to Genetics Appendix regarding withdraw process and sample destruction process.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
