Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 November 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	25 November 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the efficacy of solifenacin 5 mg in combination with mirabegron 50 mg (referred to as combination therapy from here on) vs solifenacin 5 mg monotherapy.

Protection of trial subjects:

This clinical study was written, conducted and reported in accordance with the protocol, International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) Good Clinical Practice (GCP) Guidelines, and applicable local regulations, including the European Directive 2001/20/EC, on the protection of human rights, and with the ethical principles that have their origin in the Declaration of Helsinki. Astellas ensures that the use and disclosure of protected health information (PHI) obtained during a research study complies with the federal, national and/or regional legislation related to the privacy and protection of personal information.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 July 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1492
From 65 to 84 years	671
85 years and over	11

Subject disposition

Recruitment

Recruitment details:

This multicenter study was conducted at 281 centers globally. Randomization was stratified by sex, age group (< 65, ≥ 65 years), 4-week incontinence episode reduction group (< 50%, ≥ 50%) and geographic region.

Pre-assignment

Screening details:

Participants who met the screening inclusion/exclusion criteria went through a two week wash-out period and maintained a micturition diary during that the wash-out period. A total of 3815 participants were screened of which 2401 participants received solifenacin 5 mg run-in medication. A total of 2174 participants were randomized.

Pre-assignment period milestones

Number of subjects started	3815 ^[1]
Intermediate milestone: Number of subjects	Received 1 dose, single-blind run-in: 2401
Number of subjects completed	2174

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Discontinued before run-in solifenacin 5 mg: 1414
Reason: Number of subjects	Exclusion/inclusion criteria not met: 169
Reason: Number of subjects	Patient withdrawn: 32
Reason: Number of subjects	Adverse event: 16
Reason: Number of subjects	Other reasons: 7
Reason: Number of subjects	Lost to follow-up: 3

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of participants included in the pre-assignment period were the total number screened. The number of participants included in the worldwide number enrolled were the total number of participants randomized.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

The study was comprised of a 12 week double-blind treatment period (participants were randomized into the double-blind period if they experienced 1 or more incontinence episodes over the 3-day diary period prior to randomization to double-blind period and warranted additional relief for their OAB symptoms). There was 2 week safety follow up period (placebo administered). The active and placebo tablets were made indistinguishable by using a double-dummy packaging system.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Combination (solifenacin + mirabegron)
Arm description: Participants received solifenacin 5 mg, mirabegron 25 mg and solifenacin 10 mg matching placebo once daily for the first 4 weeks of double-blind period. For the last 8 weeks of the double-blind treatment period, the 25 mg mirabegron tablet was replaced by a 50 mg mirabegron tablet. Placebo was given for the 2 week single-blind safety follow-up period.	
Arm type	Experimental
Investigational medicinal product name	solifenacin 5 mg
Investigational medicinal product code	YM905
Other name	Vesicare, Vesitrim, Vesikur, solifenacin succinate
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Solifenacin was provided as the marketed formulation in the 5 mg strength. Medication was taken orally with a glass of water, with or without food.

Investigational medicinal product name	solifenacin 10 mg matching placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo of solifenacin succinate 10 mg tablets was supplied. Medication was taken orally with a glass of water, with or without food.

Investigational medicinal product name	mirabegron 25 mg
Investigational medicinal product code	YM178
Other name	Betanis, Betmiga, Myrbetriq
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Mirabegron was supplied as the marketed formulation in the 25 mg OCAS (Oral Controlled Absorption System) modified release tablets. Medication was taken orally with a glass of water, with or without food.

Investigational medicinal product name	mirabegron 50 mg
Investigational medicinal product code	YM178
Other name	Betanis, Betmiga, Myrbetriq
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Mirabegron was supplied as the marketed formulation in the 50 mg OCAS (Oral Controlled Absorption System) modified release tablets. Medication was taken orally with a glass of water, with or without food.

Arm title	Solifenacin 5 mg
Arm description: Participants received solifenacin 5 mg, mirabegron 25 mg matching placebo and solifenacin 10 mg matching placebo once daily. For the last 8 weeks of the double-blind treatment period, the 25 mg mirabegron matching placebo tablet was replaced by a 50 mg mirabegron matching placebo tablet (to maintain the blind). Placebo was given for the 2 week single-blind safety follow-up period.	
Arm type	Active comparator
Investigational medicinal product name	solifenacin 5 mg
Investigational medicinal product code	YM905
Other name	Vesicare, Vesitrim, Vesikur, solifenacin succinate
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Solifenacin was provided as the marketed formulation in the 5 mg strength. Medication was taken orally

with a glass of water, with or without food.

Investigational medicinal product name	solifenacin 10 mg matching placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo of solifenacin succinate 10 mg tablets was supplied. Medication was taken orally with a glass of water, with or without food.

Investigational medicinal product name	mirabegron 25 mg matching placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo of mirabegron OCAS 25 mg tablets was supplied. Medication was taken orally with a glass of water, with or without food.

Investigational medicinal product name	mirabegron 50 mg matching placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo of mirabegron OCAS 50 mg tablets was supplied. Medication was taken orally with a glass of water, with or without food.

Arm title	Solifenacin 10 mg
------------------	-------------------

Arm description:

Participants received solifenacin 5 mg matching placebo, mirabegron 25 mg matching placebo and solifenacin 10 mg once daily. For the last 8 weeks of the double-blind treatment period, the 25 mg mirabegron matching placebo tablet was replaced by a 50 mg mirabegron matching placebo tablet (to maintain the blind). Placebo was given for the 2 week single-blind safety follow-up period.

Arm type	Active comparator
Investigational medicinal product name	solifenacin 5 mg matching placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo of solifenacin succinate 5 mg tablets was supplied. Medication was taken orally with a glass of water, with or without food.

Investigational medicinal product name	solifenacin 10 mg
Investigational medicinal product code	YM905
Other name	Vesicare, Vesitrim, Vesikur, solifenacin succinate
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Solifenacin was provided as the marketed formulation in the 10 mg strength. Medication was taken orally with a glass of water, with or without food.

Investigational medicinal product name	mirabegron 25 mg matching placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo of mirabegron OCAS 25 mg tablets was supplied. Medication was taken orally with a glass of water, with or without food.

Investigational medicinal product name	mirabegron 50 mg matching placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo of mirabegron OCAS 50 mg tablets was supplied. Medication was taken orally with a glass of water, with or without food.

Primary: Change from Baseline to End of Treatment (EoT) in Mean Number of Incontinence Episodes Per 24 Hours

End point title	Change from Baseline to End of Treatment (EoT) in Mean Number of Incontinence Episodes Per 24 Hours
End point description: The mean number of incontinence episodes (complaint of any involuntary leakage of urine) per day was derived from number of incontinence episodes recorded on valid diary days during the 3-day micturition diary period divided by the number of valid diary days during the 3-day micturition diary period. The analysis population consisted of the Full Analysis Set (FAS) which comprised of all the Randomized Analysis Set's (RAS) participants who met the following criteria: took at least 1 dose of double-blind study drug after randomization, reported at least 1 micturition in the baseline diary & at least 1 micturition postbaseline & reported at least 1 incontinence episode in the baseline diary. For participants who withdrew before EoT (week 12) and have no measurement available for that diary period, the Last Observation Carried Forward (LOCF) value during the double-blind study period was used as EoT value to derive the primary variable.	
End point type	Primary

Statistical analyses

Statistical analysis title	Adjusted Difference Combination vs Solifenacin 5mg
-----------------------------------	--

Statistical analysis description:

Differences of adjusted means were calculated by subtracting adjusted mean of solifenacin monotherapy groups from adjusted mean of combination group based on ANCOVA model. Means (LS means) and 95% Confidence Intervals (CIs) are from an ANCOVA model with sex, age group (< 65, ≥ 65 years), geographic region, and 4-week incontinence episode reduction group as fixed factors and mean number of incontinence episodes per 24 hours at baseline as a covariate.

Comparison groups	Combination (solifenacin + mirabegron) v Solifenacin 5 mg
Number of subjects included in analysis	1410
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.001 ^[1]
Method	stratified rank ANCOVA
Parameter estimate	Least Squares (LS) Means
Point estimate	-0.26
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.47
upper limit	-0.05
Variability estimate	Standard error of the mean
Dispersion value	0.11

Notes:

[1] - P values for pairwise comparisons were from the stratified rank ANCOVA model. P < 0.05 indicated superiority in favor of treatment group with the largest improvement.

Secondary: Change from Baseline to Weeks 4, 8 & 12 in Mean Number of Incontinence Episodes per 24 Hours

End point title	Change from Baseline to Weeks 4, 8 & 12 in Mean Number of Incontinence Episodes per 24 Hours
-----------------	--

End point description:

The mean number of incontinence episodes (complaint of any involuntary leakage of urine) per day was derived from number of incontinence episodes recorded on valid diary days during the 3-day micturition diary period divided by the number of valid diary days during the 3-day micturition diary period. The analysis population consisted of the FAS. N=number of participants with available data (applicable for all secondary endpoints).

Secondary: Change from Baseline in Mean Number of Urgency Incontinence (UI) Episodes per 24 Hours

End point title	Change from Baseline in Mean Number of Urgency Incontinence (UI) Episodes per 24 Hours
-----------------	--

End point description:

UI was defined as the complaint of involuntary urine leakage accompanied by or immediately preceded by urgency. UI was measured using the Patient Perception of Intensity of Urgency Scale (PPIUS), a patient reported outcome validated 5-point categorical scale rating the degree of associated urinary urgency severity (0=No urgency, I felt no need to empty my bladder, but did so for other reasons. 1=Mild, I could postpone voiding as long as necessary, without fear of wetting myself. 2= Moderate, I could postpone voiding for a short while, without fear of wetting myself. 3=Severe, I could not postpone voiding, but had to rush to the toilet in order not to wet myself. 4=Urgency incontinence, I leaked before arriving to the toilet). One urgency incontinence episode was counted for each record of the diary in which the following occurred: incontinence episode or 'both' was recorded & severity of urinary urgency recorded was 3 or 4. LOCF was used for EoT. FAS population.

Statistical analysis description:

Rate ratio, 95% CIs, and p-value for number of UI episodes during EoT 3-day diary between combination and solifenacin treatment was calculated from a Mixed Effects Poisson (negative binomial) regression model including treatment group, sex, age group (<65, ≥65 years), geographic region and 4-week incontinence episode reduction group as factors, log of (number of UI episodes/number of valid diary days) at baseline as covariate and log of number of valid diary as the offset variable.

Comparison groups	Combination (solifenacin + mirabegron) v Solifenacin 5 mg
Number of subjects included in analysis	1412
Analysis specification	Pre-specified
Analysis type	superiority ^[30]
P-value	= 0.038 ^[31]
Method	Mixed Effects Poisson
Parameter estimate	Rate Ratio
Point estimate	0.83
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.69
upper limit	0.99
Variability estimate	Standard error of the mean
Dispersion value	0.09

Notes:

[30] - Only participants with at least one UI episode reported in baseline diary were included.

[31] - $p < 0.05$ indicates superiority in favor of treatment group with lowest rate of UI episodes.

Statistical analysis title	Rate Ratio Combination vs 5 mg Solifenacin EoT
-----------------------------------	--

Statistical analysis description:

Rate ratio, 95% CIs, and p-value for number of UI episodes during EoT 3-day diary between combination and solifenacin treatment was calculated from a Mixed Effects Poisson (negative binomial) regression model including treatment group, sex, age group (<65, ≥65 years), geographic region and 4-week incontinence episode reduction group as factors, log of (number of UI episodes/number of valid diary days) at baseline as covariate and log of number of valid diary as the offset variable.

[33] - $p < 0.05$ indicates superiority in favor of treatment group with lowest rate of UI episodes.

Secondary: Change from Baseline in Mean Number of Urgency Episodes (Grade 3 and/or 4) per 24 Hours

End point title	Change from Baseline in Mean Number of Urgency Episodes (Grade 3 and/or 4) per 24 Hours
-----------------	---

End point description:

An urgency episode was defined as the complaint of a sudden, compelling desire to pass urine, which is difficult to defer. The mean number of urgency episodes (severity of 3 or 4) per 24 hours was defined as the average number of times a participant recorded an urgency episode (severity of 3 or 4) with or without incontinence per day during the 3-day micturition diary period. Measured using the PPIUS scale. This was calculated using the sum of each record with an urgency episode (severity of 3 or 4) recorded on a valid diary day divided by the number of valid diary days during the 3-day micturition diary period. LOCF was used for EoT. The analysis population consisted of the FAS.

Secondary: Change from Baseline in Mean Number of Nocturia Episodes

End point title	Change from Baseline in Mean Number of Nocturia Episodes
-----------------	--

End point description:

Mean number of nocturia episodes was defined as the number of times a participant urinated (excluding incontinence only episodes) while sleeping during the 3-day diary period, divided by the number of valid diary days during the diary period. Night time episode of incontinence only was not considered a nocturia episode. Nocturia episodes were counted for each micturition record which occurred between the date/time of going to bed with intention to sleep and the date/time of getting up with intention to stay awake on a valid diary day & which was accompanied by a sleep interruption. Nocturia only determined for those who were not night-shift workers. LOCF used for EoT.

Statistical analysis description:

Adjusted change from baseline values as well as 95% CIs and p-value were generated from an ANCOVA model with treatment group, sex, age group (<65, ≥65 years), 4-week incontinence reduction group

and geographic region as fixed factors and baseline value as a covariate. Differences of adjusted means were calculated by subtracting adjusted mean of solifenacin monotherapy groups from adjusted mean of combination group.

Comparison groups	Combination (solifenacin + mirabegron) v Solifenacin 5 mg
Number of subjects included in analysis	1412
Analysis specification	Pre-specified
Analysis type	superiority ^[64]
P-value	= 0.174 ^[65]
Method	ANCOVA
Parameter estimate	LS Means
Point estimate	-0.06
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.16
upper limit	0.03
Variability estimate	Standard error of the mean
Dispersion value	0.05

Notes:

[64] - Only participants with at least one nocturia episode reported in baseline diary were included. The analysis population consisted of the FAS.

[65] - P-values for pairwise comparisons were from the ANCOVA model described above. $p < 0.05$ indicates superiority in favor of treatment group with the largest improvement.

Secondary: Number of Nocturia Episodes Reported Over 3-Day Diary

End point title	Number of Nocturia Episodes Reported Over 3-Day Diary
End point description:	The number of nocturia episodes was defined as the number of times a participant urinated (excluding incontinence only episodes) during sleeping time during the 3-day micturition diary period. This was calculated using the sum of each nocturia episode recorded on valid diary days during the 3-day micturition diary period. LOCF was used for EoT. The analysis population consisted of the FAS.
End point type	Secondary
End point timeframe:	Weeks 4, 8 and 12

End point values	Combination (solifenacin + mirabegron)	Solifenacin 5 mg	Solifenacin 10 mg	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	707	705	698	
Units: nocturia episodes				
arithmetic mean (standard error)				
Week 4 (N= 526, 514, 517)	3.63 (± 0.12)	3.59 (± 0.12)	3.58 (± 0.12)	
Week 8 (N= 500, 501, 514)	3.33 (± 0.12)	3.35 (± 0.12)	3.32 (± 0.12)	
Week 12 (N= 492, 480, 510)	3.12 (± 0.13)	3.26 (± 0.12)	3.23 (± 0.12)	
EoT (N= 537, 523, 531)	3.16 (± 0.12)	3.28 (± 0.11)	3.19 (± 0.12)	

Statistical analyses

Statistical analysis title	Rate Ratio Combination vs 5 mg Solifenacin Week 4
Statistical analysis description:	
Rate ratio, 95% CIs, & p-value for number of nocturia episodes during the 3-day diary between combination & solifenacin treatment was calculated from a Mixed Effects Poisson (negative binomial) regression model including treatment group, sex, age group (<65, >=65 years), geographic region & 4-week incontinence episode reduction group as factors, log of (number of nocturia episodes/number of valid diary days) at baseline as covariate and log of number of valid diary days as the offset variable.	
Comparison groups	Combination (solifenacin + mirabegron) v Solifenacin 5 mg
Number of subjects included in analysis	1412
Analysis specification	Pre-specified
Analysis type	superiority ^[66]
P-value	= 0.993 ^[67]
Method	Mixed Effects Poisson

Notes:

[77] - P-values for pairwise comparisons were from the ANCOVA model described above. $p < 0.05$ indicated superiority in favor of treatment group with the largest improvement.

Secondary: Change from Baseline in OAB-q Health-Related Quality of Life (HRQL) Total Score

End point title	Change from Baseline in OAB-q Health-Related Quality of Life (HRQL) Total Score
-----------------	---

End point description:

The OAB-q was a self-reported questionnaire comprising 33-items each rated on a 6-point Likert scale. The questionnaire consisted of an 8-item symptom bother scale and 25 health-related QoL (HRQL) items comprising 4 HRQL subscales (Coping, Concern, Sleep, and Social Interaction). HRQL subscales (coping, concern, sleep and social) and total score range from 0 (worst quality of life) to 100 (best quality of life). LOCF was used for EoT. The analysis population consisted of the FAS.

Statistical analyses

Statistical analysis title	Adj. Diff. Combination vs Solifenacin 5mg Week 4
-----------------------------------	--

Statistical analysis description:

Adjusted change from baseline values as well as 95% CIs & p-value were generated from ANCOVA model with treatment group, sex, age group (<65, ≥65 years), 4-week incontinence reduction group and geographic region as fixed factors & baseline value as a covariate. Differences of adjusted means were calculated by subtracting adjusted mean of solifenacin monotherapy groups from adjusted mean of combination group.

-----------------------	--

Reporting group description:

Participants received solifenacin 5 mg, mirabegron 25 mg and solifenacin 10 mg matching placebo once daily for the first 4 weeks of double-blind period. For the last 8 weeks of the double-blind treatment period, the 25 mg mirabegron tablet was replaced by a 50 mg mirabegron tablet. Placebo was given for the 2 week single-blind safety follow-up period.

Reporting group title	Solifenacin 10 mg
-----------------------	-------------------

occurrences (all)	44	70	44

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

One participant was randomized to the Combination arm, but actually received Solifenacin 10 mg. In terms of actual treatment received, the participant was allocated to the solifenacin 10 mg arm.
--

Notes:
