

Clinical trial results:

A phase III, randomized, open study to assess the immunogenicity, reactogenicity and safety of two different formulations of GlaxoSmithKline (GSK) Biologicals' oral live attenuated human rotavirus (HRV) vaccine, Rotarix, when given as a two-dose primary vaccination, in healthy infants with no previous history of rotavirus illness or vaccination

Analysis stage	Final
Date of interim/final analysis	14 September 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 December 2019
Global end of trial reached?	Yes
Global end of trial date	28 December 2019
Was the trial ended prematurely?	No
Notes:	

General information about the trial

Main objective of the trial:

To evaluate non-inferiority of GSK Biologicals' HRV liquid vaccine compared to GSK Biologicals' HRV lyophilized vaccine in terms of geometric mean concentrations (GMCs) for anti-RV antibodies, one month post dose 2 of HRV liquid vaccine and HRV lyophilized vaccine.

Criterion: Non-inferiority will be stated if the lower limit of the two-sided 95% confidence interval (CI) for the ratio of anti RV IgA antibody GMCs between HRV liquid vaccine over the HRV lyophilized vaccine, one month after dose 2 is greater than or equal to 0.5.

Protection of trial subjects:

All subjects were observed closely for 30 min following the administration of the vaccine, with appropriate medical treatment readily available in case of anaphylaxis. Vaccines were administered by qualified and trained personnel. Vaccines were administered only to eligible subjects that had no contraindications to any components of the vaccines. Subjects were followed-up for 30 days after the last vaccination.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 February 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	India: 451
Worldwide total number of subjects	451
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	451
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0

85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 8 centers in India.

Pre-assignment

Screening details:

Out of 451 subjects enrolled in the study, 1 subject did not receive any study treatment and 1 vaccinated subject was eliminated from all analysis due to incorrect impartial witness. 449 subjects were vaccinated and included in the Exposed Set, 419 subjects completed the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	HRV Liq Group

Arm description:

Subjects aged 6 to 10 weeks at the time of first vaccination, who received two oral doses of Liquid Human Rotavirus Vaccine (HRV) according to a two-dose schedule, at Day 1 and Month 1.

Arm type	Experimental
Investigational medicinal product name	Liquid Human Rotavirus Vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Two doses administered orally according to a 0, 1-month schedule.

Arm title	HRV Lyo Group
------------------	---------------

Arm description:

Subjects aged 6 to 10 weeks at the time of first vaccination who received two oral doses of Lyophilized Human Rotavirus Vaccine (HRV) according to a two-dose schedule, at Day 1 and Month 1.

Arm type	Active comparator
Investigational medicinal product name	Lyophilized Human Rotavirus Vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for oral suspension
Routes of administration	Oral use

Dosage and administration details:

Two doses administered orally according to a 0, 1-month schedule.

Number of subjects in period 1^[1]	HRV Liq Group	HRV Lyo Group
Started	224	225
Completed	209	210
Not completed	15	15
NOT WILLING TO PARTICIPATE THIS VISIT	9	7
MIGRATED / MOVED FROM THE STUDY AREA	3	5
CONSENT WITHDRAWAL NOT DUE TO AE	1	2
Lost to follow-up	2	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Out of 451 subjects enrolled in the study, 1 subject did not receive any study treatment and 1 vaccinated subject was eliminated from all analysis due to incorrect impartial witness.

449 subjects were vaccinated and included in the Exposed Set, 419 subjects completed the study.

End points

End points reporting groups

Reporting group title	HRV Liq Group
Reporting group description: Subjects aged 6 to 10 weeks at the time of first vaccination, who received two oral doses of Liquid Human Rotavirus Vaccine (HRV) according to a two-dose schedule, at Day 1 and Month 1.	
Reporting group title	HRV Lyo Group
Reporting group description: Subjects aged 6 to 10 weeks at the time of first vaccination who received two oral doses of Lyophilized Human Rotavirus Vaccine (HRV) according to a two-dose schedule, at Day 1 and Month 1.	

Primary: Anti-rotavirus (Anti-RV) immunoglobulin A (IgA) antibody concentrations

End point title	Anti-rotavirus (Anti-RV) immunoglobulin A (IgA) antibody concentrations
End point description: Serum anti-RV IgA antibody concentrations were expressed as geometric mean concentrations (GMCs). Analysis was performed on Per Protocol Set (PPS) for immunogenicity, which included all eligible subjects who received both doses of HRV vaccine, complied with vaccination schedule and for whom immunogenicity data were available at the specified time point.	
End point type	Primary
End point timeframe: At Month 2	

End point values	HRV Liq Group	HRV Lyo Group		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	189	192		
Units: U/mL				
geometric mean (confidence interval 95%)				
Anti-RV IgA	90.25 (67.28 to 121.06)	94.16 (70.29 to 126.13)		

Statistical analyses

Statistical analysis title	Anti-RV IgA GMCs (non-inferiority)
Statistical analysis description: Non-inferiority comparison between GSK Biologicals' HRV liquid vaccine (HRV Liq Group) and GSK Biologicals' HRV lyophilized vaccine (HRV Lyo Group) in terms of geometric mean concentrations (GMCs) for anti-RV antibodies, one month after the administration of the second dose of study vaccine.	
Comparison groups	HRV Liq Group v HRV Lyo Group
Number of subjects included in analysis	381
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
Method	ANCOVA

Parameter estimate	GMC ratio
Point estimate	0.93
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.65
upper limit	1.34

Notes:

[1] - Lower limit (LL) of the two-sided 95% confidence interval (CI) for the ratio of anti-RV IgA antibody GMCs between HRV Liq Group over the HRV Lyo Group should be greater than or equal to (\geq) 0.5.

Secondary: Percentage of seroconverted subjects for anti-RV IgA antibodies

End point title	Percentage of seroconverted subjects for anti-RV IgA antibodies
-----------------	---

End point description:

Seroconversion is defined as: - for subjects with a pre-vaccination anti-RV IgA antibody concentration lower than ($<$) 20 U/mL, seroconversion is achieved when the post-vaccination concentration is greater than or equal to (\geq) 20 U/mL and

- for subjects with a pre-vaccination anti-RV IgA antibody concentration \geq 20 U/mL, seroconversion is achieved when the post-vaccination concentration is \geq 2 times the pre-vaccination concentration.

Analysis was performed on PPS for immunogenicity, which included all eligible subjects who received both doses of HRV vaccine, complied with vaccination schedule and for whom immunogenicity data were available at the specified time point.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 July 2013	NDAC- Vaccines (New Drug Advisory Committee on Vaccines) of Drugs Controller General of India (DCGI) recommended to conduct this study as a Phase IV study instead of phase III as initially planned because Rotarix liquid file application is considered as a line extension of Rotarix Lyophilized formulation. The protocol was amended to adapt the change recommended by NDAC-Vaccines of DCGI.
31 October 2017	<ul style="list-style-type: none">- The phase of this clinical trial is revised from Phase IV to Phase III.- The study objectives have been updated to include a confirmatory primary objective and the study has been powered accordingly.- The statistical considerations have been revised to define the success criteria for the primary objective.- Collection and testing of stool samples from subjects who develop gastroenteritis (GE) during the study period is removed.- The study procedures, list of assays and section on biological samples evaluation have been updated accordingly.
30 October 2019	<ul style="list-style-type: none">- The PPS was modified to include subjects seroposi-tive at baseline.- The statistical method to derive the 95% CI for the GMC group ratio was revised to be an ANCOVA.- The seroconversion threshold was redefined to account for seropositive subjects at pre-vaccination.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
