Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

### Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 November 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 September 2019
Global end of trial reached?	Yes
Global end of trial date	07 October 2019
Was the trial ended prematurely?	No
Notes:	

## General information about the trial

Main objective of the trial:

The primary objective of the trial was to evaluate the effect of empagliflozin 10 mg vs. placebo on exercise ability using the 6-minute walk test (6MWT) in patients with chronic heart failure (CHF) with reduced left ventricular ejection fraction (LVEF  $\leq 40\%$ ). Secondary objectives were to assess patient-reported Outcomes (PRO).

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. An independent DMC was formed to monitor patients' safety throughout the conduct of the trial at regular meetings. An independent external CEC adjudicated selected hepatic events and ketoacidosis while blinded to the patient's treatment allocation.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 March 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 12
Country: Number of subjects enrolled	Canada: 17
Country: Number of subjects enrolled	Germany: 63
Country: Number of subjects enrolled	Spain: 52
Country: Number of subjects enrolled	Greece: 37
Country: Number of subjects enrolled	Italy: 27
Country: Number of subjects enrolled	Norway: 20
Country: Number of subjects enrolled	Poland: 101
Country: Number of subjects enrolled	Portugal: 44
Country: Number of subjects enrolled	Sweden: 17
Country: Number of subjects enrolled	United States: 317
Worldwide total number of subjects	707
EEA total number of subjects	361

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	258
From 65 to 84 years	424
85 years and over	25

## Subject disposition

### Recruitment

Recruitment details:

Randomised, double-blind, placebo-controlled, parallel-group trial in patients with chronic Heart Failure with reduced Ejection Fraction (HFrEF) to evaluate the effect of Empagliflozin versus Placebo on exercise and heart failure symptoms.

### Pre-assignment

Screening details:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

Patients, investigators, and everyone involved in trial conduct or analysis or with any other interest in this double-blind trial remained blinded with regard to the randomised treatment assignments until after database lock. The randomisation code was kept secret by Clinical Trial Support up to database lock.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

1 film-coated tablet of placebo matching empagliflozin was administered orally once daily for 12 weeks in subjects with chronic Heart Failure (CHF) with reduced left ventricular ejection fraction (LVEF $\leq$ 40%).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

1 film-coated tablet of placebo matching empagliflozin was administered orally once daily for 12 weeks in subjects with chronic Heart Failure (CHF) with reduced left ventricular ejection fraction (LVEF $\leq$ 40%).

<b>Arm title</b>	10 mg Empagliflozin
------------------	---------------------

Arm description:

1 film-coated tablet of 10 milligram (mg) of empagliflozin was administered orally once daily for 12 weeks in subjects with chronic Heart Failure (CHF) with reduced left ventricular ejection fraction (LVEF $\leq$ 40%).

Arm type	Experimental
Investigational medicinal product name	Empagliflozin
Investigational medicinal product code	
Other name	Jardiance®
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

1 film-coated tablet of 10 milligram (mg) of Empagliflozin was administered orally once daily for 12 weeks in subjects with chronic Heart Failure (CHF) with reduced left ventricular ejection fraction

(LVEF $\leq$ 40%).

<b>Number of subjects in period 1<sup>[1]</sup></b>	Placebo	10 mg Empagliflozin
Started	156	156
Treated	156	155
Completed	143	140
Not completed	13	16
Withdrawn by Sponsor	-	1
Adverse event, serious fatal	3	1
Adverse event, non-fatal	7	8
Consent withdrawn by subject	3	1
Patient did not attend all visits	-	2
Not treated	-	1
Lost to follow-up	-	2

---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 707 subjects were enrolled worldwide and thereof 312 subjects were included in the trial.

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description:	
1 film-coated tablet of placebo matching empagliflozin was administered orally once daily for 12 weeks in subjects with chronic Heart Failure (CHF) with reduced left ventricular ejection fraction (LVEF≤40%).	
Reporting group title	10 mg Empagliflozin
Reporting group description:	
1 film-coated tablet of 10 milligram (mg) of empagliflozin was administered orally once daily for 12 weeks in subjects with chronic Heart Failure (CHF) with reduced left ventricular ejection fraction (LVEF≤40%).	

Reporting group values	Placebo	10 mg Empagliflozin	Total
Number of subjects	156	156	312
Age categorical			
Randomised Set: All subjects that were randomised, regardless of whether treated or not.			
Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	0	0	0
Adults (18-64 years)	48	47	95
From 65-84 years	97	106	203
85 years and over	11	3	14
Age Continuous			
Randomised Set: All subjects that were randomised, regardless of whether treated or not.			
Units: years			
arithmetic mean	69.3	68.7	
standard deviation	± 10.6	± 9.9	-
Sex: Female, Male			
Randomised Set: All subjects that were randomised, regardless of whether treated or not.			
Units: Subjects			
Female	45	35	80
Male	111	121	232
Race (NIH/OMB)			
Randomised Set: All subjects that were randomised, regardless of whether treated or not.			
Units: Subjects			
American Indian or Alaska Native	1	1	2
Asian	2	1	3
Native Hawaiian or Other Pacific Islander	1	0	1
Black or African American	18	24	42
White	133	130	263
More than one race	0	0	0
Unknown or Not Reported	1	0	1
Ethnicity (NIH/OMB)

Not Hispanic or Latino	132	136	268
Unknown or Not Reported	1	0	1
Exercise capacity as measured by the 6-Minutes-Walking-Test (6MWT) distance at baseline			
6 Minute Walking test measures the distance walked in 6 minutes in standardised conditions at baseline. Randomised Set: All subjects that were randomised, regardless of whether treated or not.			
Units: Meter			
median	309.0	306.0	
inter-quartile range (Q1-Q3)	248.5 to 332.0	260.0 to 333.5	-

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description:	
1 film-coated tablet of placebo matching empagliflozin was administered orally once daily for 12 weeks in subjects with chronic Heart Failure (CHF) with reduced left ventricular ejection fraction (LVEF≤40%).	
Reporting group title	10 mg Empagliflozin
Reporting group description:	
1 film-coated tablet of 10 milligram (mg) of empagliflozin was administered orally once daily for 12 weeks in subjects with chronic Heart Failure (CHF) with reduced left ventricular ejection fraction (LVEF≤40%).	

### Primary: Change from baseline to week 12 in exercise capacity as measured by the 6-Minutes-Walking-Test (6MWT) distance

End point title	Change from baseline to week 12 in exercise capacity as measured by the 6-Minutes-Walking-Test (6MWT) distance
End point description:	
Change from baseline to week 12 in exercise capacity as measured by the distance walked in 6 minutes in standardised conditions. If repeated 6MWT measurements were available for the same day, the longest distance was used for analysis. Change from baseline was defined as the distance walked in 6 minutes at week 12 minus the baseline value. Baseline value was defined as the last available measurement before start of treatment with randomised study medication. If a subject was present at the visit at week 12 but did not perform the 6MWT, the subject was evaluated as having walked a distance of 0 meter. If no value was available for week 12, an imputed value was used. Patients with missing week 12 data who had no clinical event were ranked below any patient with non-missing data, but above the patients who had clinical events. Patients who died before week 12 were ranked below the patients in all categories above. Randomised Set (RS).	
End point type	Primary
End point timeframe:	
At baseline and at week 12	

End point values	Placebo	10 mg Empagliflozin

## Secondary: Change from baseline to week 12 in Kansas City Cardiomyopathy Questionnaire (KCCQ) Total Symptom Score (TSS)

End point title	Change from baseline to week 12 in Kansas City Cardiomyopathy Questionnaire (KCCQ) Total Symptom Score (TSS)
-----------------	--

### End point description:

Change from baseline in KCCQ-TSS was defined as the endpoint value at week 12 minus the last available measurement before start of treatment with randomised study medication. The KCCQ is 23 item self-administered questionnaire and comprises 7 domains: physical limitation, symptom frequency, symptom burden, symptom stability, social limitation, self-efficacy and quality of life. Additionally 3 summary scores exist: TSS, clinical summary score, and overall summary score. The scores of the KCCQ domains and summary scores range from 0 to 100, with higher score indicating better outcome. If no questionnaire was available at week 12, an imputed value was used. Patients with missing week 12 data who had no clinical event were ranked below any patient with non-missing data, but above the patients who had clinical events. Patients who died before week 12 were ranked below the patients in all categories above. If no questionnaire was available at baseline, change from baseline was not imputed.

## Secondary: Change from baseline to week 12 in Clinical Congestion Score

End point title	Change from baseline to week 12 in Clinical Congestion Score
End point description:	Change from baseline to week 12 in Clinical Congestion score is defined as the score-value at week 12 minus the score-value at baseline. Baseline value was defined as the last available measurement before start of treatment with randomised study medication. The Clinical Congestion score assessed the subjects congestion using a clinician-based outcome assessment of 6 different signs and symptoms: dyspnoea, orthopnoea, fatigue, jugular venous distention (as assessed by the investigator), rales, and oedema. Each category was assessed through a 4-measure questionnaire, which was further converted to a standardised 4-point scale ranging from 0 to 3, which 0 indicating no or fewer symptoms and 3 indicating continuous or more symptoms. Mean is adjusted mean. Only subjects in the randomised set (RS) who have baseline and at least one post-baseline value, are included in the analysis.
End point type	Secondary

End point description: The PGI-C in Dyspnoea is a 1-item questionnaire designed to assess the patient's Impression of change in dyspnoea. The PGI-C asks the patient to choose one response that best describes the change (if any) in his/her shortness of breath when performing usual activities since he/she started taking the study medication on a 7-category scale ranging from 'Very much better' (+3) to 'Very much worse' (-3). Only subjects in the randomised set (RS) who have week 12 value are included in the analysis.	
End point type	Secondary
End point timeframe: At week 12	

End point values	Placebo	10 mg Empagliflozin		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	149 <sup>[17]</sup>	147 <sup>[18]</sup>		
Units: Subjects				
Very much worse	0	0		
Much worse	2	0		
A little worse	6	3		
No change	52	49		
A little better	45	59		
Much better	34	30		
Very much better	10	6		

Notes:

[17] - Only subjects in the randomised set (RS) who have week 12 value.

[18] - Only subjects in the randomised set (RS) who have week 12 value.

## Statistical analyses

Statistical analysis title	Effect of Empagliflozin vs Placebo
Statistical analysis description: Test on difference in mean treatment scores, based on modified ridit scores.	
Comparison groups	Placebo v 10 mg Empagliflozin
Number of subjects included in analysis	296
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.863
Method	Cochran-Mantel-Haenszel test

## Secondary: Relative change from baseline to week 12 in N-terminal pro-brain natriuretic peptide (NTproBNP)

End point title	Relative change from baseline to week 12 in N-terminal pro-brain natriuretic peptide (NTproBNP)
End point description: Relative change from baseline to week 12 in N-terminal pro-brain natriuretic peptide (NTproBNP). Baseline value was defined as the mean of all available measurements from the screening visit until start of treatment with randomised study medication. Only subjects in the randomised set (RS), who had values at baseline and at least one post baseline value are included in the analysis.	
End point type	Secondary

End point timeframe:

Within 3 weeks prior to treatment start and at Week 12

End point values	Placebo	10 mg Empagliflozin		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	153 <sup>[19]</sup>	155 <sup>[20]</sup>		
Units: Ratio of adjusted geometric means				
number (confidence interval 95%)	0.98 (0.90 to 1.06)	0.89 (0.82 to 0.97)		

Notes:

[19] - Subjects in the randomised set, who have values at baseline and at least on post baseline value.

[20] - Subjects in the randomised set, who have values at baseline and at least one post-baseline value.

## Statistical analyses

Statistical analysis title	Effect of Empagliflozin vs Placebo
Statistical analysis description:	
The endpoint 'relative change from baseline in NT-proBNP at Week 12' (after log-transformation) was evaluated using an MMRM analysis over time with baseline log-transformed NT-proBNP-by-visit interaction and visit-by-treatment interaction as covariates. Unstructured covariance structure was used to model within-patient errors.	
Comparison groups	Placebo v 10 mg Empagliflozin
Number of subjects included in analysis	308
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.141
Method	Mixed Model repeated Measures (MMRM)
Parameter estimate	Adjusted geometric mean ratio
Point estimate	0.91
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.81
upper limit	1.03

## Adverse events

### Adverse events information<sup>[1]</sup>

Timeframe for reporting adverse events:

From first intake of study medication, until 7 days after last intake of study medication, up to 91 days.

Adverse event reporting additional description:

Treated Set: All participants who were treated with at least 1 dose of the study medication.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	22.0
--------------------	------

### Reporting groups

Reporting group title	10 mg Empagliflozin
-----------------------	---------------------

Reporting group description:

1 film-coated tablet of 10 milligram (mg) of empagliflozin was administered orally once daily for 12 weeks in subjects with chronic Heart Failure (CHF) with reduced left ventricular ejection fraction (LVEF $\leq$ 40%).

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

1 film-coated tablet of placebo matching empagliflozin was administered orally once daily for 12 weeks in subjects with chronic Heart Failure (CHF) with reduced left ventricular ejection fraction (LVEF $\leq$ 40%).

Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: No non-serious adverse events were reported for both arms.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 May 2018	<p>The following changes were introduced by the first global protocol amendment:</p> <ul style="list-style-type: none"><li>• Clarification of the inclusion criteria regarding medical therapy for heart failure (HF) (it was allowed to include patients who were not treated according to local guidelines, in such cases the investigator had to document the reasons)</li><li>• Clarification of the exclusion criteria regarding exclusion of patients randomised in another empagliflozin HF trial (a patient could be a screen failure in another trial and then be considered for inclusion into this trial)</li></ul> <p>• Flowchart: Recommendation that NT-proBNP and safety laboratory measures should be done first at the Screening Visit and then other procedures could be done on a later day</p> <ul style="list-style-type: none"><li>• Updates to reflect the final version of the CHQ-SAS questionnaire</li><li>• Clarification that re-testing for eligibility criteria could be done only once</li><li>• Clarification that screening data of patients who failed screening can be used in the parallel trial 1245-0167</li><li>• Clarification of the exclusion criteria regarding major surgery (patients were not eligible for the trial if they had major surgery scheduled during the duration of the trial)</li><li>• Update of requirements for emergency situations</li><li>• Change of instructions for physical examinations</li><li>• Editorial changes and clarifications regarding the conduct of the 6MWT (described in detail in the Appendix of the CTP)</li></ul>
20 July 2018	<p>The following changes were introduced by the second global protocol amendment:</p> <ul style="list-style-type: none"><li>• Change of the inclusion criteria regarding the NT-proBNP level at baseline (influence of atrial fibrillation was taken into account, new levels were &gt;450 pg/ml for patients without atrial fibrillation and &gt;600 pg/ml for patients with atrial fibrillation)</li><li>• Flow chart: Clarification that at the time of the NT-proBNP measurement, the baseline rhythm of the patient (e.g. sinus rhythm, atrial fibrillation) had to be determined (i.e. by ECG) in order to assess eligibility (see NT-proBNP cut-offs above)</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
