## **Trial information**

Trial identification	
Sponsor protocol code	205203
Additional study identifiers	
ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-
Notes:	

Sponsor organisation name	GlaxoSmithKline
Sponsor organisation address	980 Great West Road, Brentford, Middlesex, United Kingdom, TW8 9GS
Public contact	GSK Response Center, GlaxoSmithKline, 1 8664357343, GSKClinicalSupportHD@gsk.com
Scientific contact	GSK Response Center, GlaxoSmithKline, 1 8664357343, GSKClinicalSupportHD@gsk.com

Notes:

Paediatric regulatory details	
Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage	
Analysis stage	Final
Date of interim/final analysis	13 March 2020

Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 December 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To describe the long-term safety profile of mepolizumab in participants with HES who took part in Study 200622.

Protection of trial subjects:

Not Applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 November 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

# **Population of trial subjects**

# Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 10
Country: Number of subjects enrolled	Brazil: 3
Country: Number of subjects enrolled	France: 17
Country: Number of subjects enrolled	Germany: 13
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	Argentina: 6
Country: Number of subjects enrolled	Mexico: 5
Country: Number of subjects enrolled	Poland: 10
Country: Number of subjects enrolled	Romania: 2
Country: Number of subjects enrolled	Russian Federation: 7
Country: Number of subjects enrolled	Spain: 3
Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	United States: 15
Worldwide total number of subjects	102
EEA total number of subjects	66

Notes:

# Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

EU-CTR publication date: 20 June 2020

Adolescents (12-17 years)	4
Adults (18-64 years)	85
From 65 to 84 years	13
85 years and over	0

# **Subject disposition**

#### Recruitment

Recruitment details:

This was a multi-center, open-label extension study to evaluate the long-term safety profile of mepolizumab in participants with Hypereosinophilic Syndrome (HES). In this study, participants received open-label mepolizumab 300 milligram (mg) subcutaneously (SC).

# **Pre-assignment**

Screening details:

A total of 102 participants who completed the parent study (200622 [NCT02836496]) and met the eligibility criteria were enrolled in this open-label extension study.

Period 1	
Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded
Arms	
Arm title	Mepolizumab 300 mg SC

#### Arm description:

Participants were administered 300 mg SC mepolizumab every 4 weeks (starting approximately 32 weeks after the first dose of study treatment in Study 200622). The final dose of mepolizumab was administered at Visit 5 (Week 16).

Arm type	Experimental
Investigational medicinal product name	Mepolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Mepolizumab was administered as three  $100\ mg\ SC$  injections every 4 weeks. It was provided in a  $100\ mg\ vial$  for injection.

Number of subjects in period 1	Mepolizumab 300 mg SC
Started	102
Completed	98
Not completed	4
Adverse event, non-fatal	1
Consent withdrawn by subject	2
Lost to follow-up	1

# **Baseline characteristics**

# **Reporting groups**

Reporting group title	Mepolizumab 300 mg SC

Reporting group description:

Participants were administered 300 mg SC mepolizumab every 4 weeks (starting approximately 32 weeks after the first dose of study treatment in Study 200622). The final dose of mepolizumab was administered at Visit 5 (Week 16).

#### **End points**

# **End points reporting groups**

Reporting group title	Mepolizumab 300 mg SC

Reporting group description:

Participants were administered 300 mg SC mepolizumab every 4 weeks (starting approximately 32 weeks after the first dose of study treatment in Study 200622). The final dose of mepolizumab was administered at Visit 5 (Week 16).

# Primary: Number of participants with common (>=3%) non-serious adverse events (AEs)

End point title	Number of participants with common (>=3%) non-serious
	adverse events (AEs) <sup>[1]</sup>

#### End point description:

An AE was any untoward medical occurrence in a clinical study participant, temporally associated with the use of a study treatment, whether or not considered related to the study treatment. Serious AE was defined as any untoward medical occurrence that, at any dose results in death, is life-threatening, requires hospitalization or prolongation of existing hospitalization, results in persistent disability/incapacity, congenital anomaly/birth defect or any other situation according to medical or scientific judgment. Non-serious AEs from start of study treatment until 28 days after last dose (up to Week 20) are reported. Number of participants with common (>=3% incidence) non-serious AEs are presented. Safety Population comprised of all participants who received at least one dose of open-label mepolizumab.

End point type	Primary	
End point timeframe:	·	
Un to Week 20		

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

End point values	Mepolizumab 300 mg SC		
Subject group type	Reporting group		
Number of subjects analysed	102[2]		
Units: Participants	34		

#### Notes:

[2] - Safety Population

## Statistical analyses

No statistical analyses for this end point

#### **Primary: Number of participants with serious AEs**

End point title	Number of participants with serious AEs <sup>[3]</sup>

#### End point description:

An AE was any untoward medical occurrence in a clinical study participant, temporally associated with the use of a study treatment, whether or not considered related to the study treatment. Serious AE was defined as any untoward medical occurrence that, at any dose results in death, is life-threatening, requires hospitalization or prolongation of existing hospitalization, results in persistent disability/incapacity, congenital anomaly/birth defect or any other situation according to medical or scientific judgment. Number of participants with serious AEs are presented.

Up to Week 28

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

End point values	Mepolizumab 300 mg SC		
Subject group type	Reporting group		
Number of subjects analysed	102 <sup>[4]</sup>		
Units: Participants	9		

Notes:

[4] - Safety Population

# Statistical analyses

No statistical analyses for this end point

Primary: Number of participants with the presence of anti-drug antibody	
End point title	Number of participants with the presence of anti-drug

End point description:

Blood samples were analyzed for the presence of anti-mepolizumab antibodies by binding anti-drug antibody (ADA) assay. The binding ADA assay results at each visit were summarized as negative or positive. The binding ADA assay was performed in three steps; screening, confirmation and titration. The screening assay produced a result of positive or negative relative to a screening cut point. Positive samples continued with the confirmation assay, which also produced a result of positive or negative relative to a confirmation cut point. For positive confirmation samples, a titre value was obtained to quantify the degree of binding in a titration assay. Participants were considered 'Positive' if they had a positive confirmation ADA assay result. Only those participants with data available at specified data points were analyzed (represented by n= X in the category titles).

#### Adverse events

#### **Adverse events information**

Timeframe for reporting adverse events:

Serious AEs were reported from start of study (Week 0) up to end of study (up to Week 28) and non-serious AEs were reported from start of study treatment until 28 days after last dose (up to Week 20)

Adverse event reporting additional description:

Non-serious AEs and serious AEs were reported for Safety Population.

# **More information**

# Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 January 2017	Amendment 01: Correct EudraCT number was provided in the protocol.
10 November 2017	Amendment 02: Added the optional biomarker sub-study and updated the text around the HES therapy adjustment after HES flare considering therapy reduction during the study.

Notes:

# **Interruptions (globally)**

Were there any global interruptions to the trial? No

# **Limitations and caveats**

None reported
