Global end of trial reached?	Yes
Global end of trial date	29 June 2017
Was the trial ended prematurely?	No

#### General information about the trial

Main objective of the trial:

The primary objective was to assess the effect of romosozumab treatment for 12 months followed by alendronate treatment compared with alendronate treatment alone on the subject incidence of:

- clinical fracture (nonvertebral fracture and clinical vertebral fracture); and
- new vertebral fracture

in postmenopausal women with osteoporosis.

#### Protection of trial subjects:

This study was conducted in accordance with International Council on Harmonisation (ICH) Good Clinical Practice (GCP) and applicable Food and Drug Administration (FDA) or local regulations/guidelines. The study protocol, subject information, and informed consent form (ICF) were reviewed and approved by the independent ethics committee (IEC) or institutional review board (IRB) for each study center. Before any study procedures were performed or any investigational products were administered, the investigator obtained written informed consent from each subject after adequate explanation of the aims, methods, anticipated benefits, and potential hazards of the study.

Background therapy: -	
Evidence for comparator: -	
Actual start date of recruitment	04 May 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

#### Recruitment

Recruitment details:

The study was conducted at 270 centers in 41 countries globally from 04 May 2012 to 29 June 2017.

### **Pre-assignment**

Screening details:

Participants were randomized in a 1:1 ratio to receive romosozumab or alendronate for 12 months. Randomization was stratified by age ( $< 75 \text{ vs.} \ge 75 \text{ years}$ ). After completion of the double-blind trial

Period 1	
Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor
Arms	
Are arms mutually exclusive?	Yes
Arm title	Alendronate/Alendronate
Arm description:	
a month for the first 12 months. After o	e once a week and placebo to romosozumab subcutaneously once ompletion of the 12-month double-blind treatment period alendronate once a week until the end of the study.
Arm type	Active comparator
Investigational medicinal product name	Alendronate
Investigational medicinal product code	
Other name	Fosamax®
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Alendronate 70-mg tablet taken once a	week
Investigational medicinal product name	Placebo to Romosozumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use
Dosage and administration details:	
Administered by subcutaneous injection	once a month during the double-blind treatment phase.
Arm title	Romosozumab/Alendronate
Arm description:	•
orally once a week for the first 12 mont	mg subcutaneously once a month and placebo to alendronate hs. After completion of the 12-month double-blind treatment dronate once a week until the end of the study.

period participants received 70 mg alendronate once a week until the end of the study.

Arm type	Experimental
Investigational medicinal product name	Placebo to Alendronate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

EU-CTR publication date: 15 July 2018

Dosage and administration details:

Matching placebo tablet taken once a week during the double-blind treatment phase.

Investigational medicinal product name	Alendronate
Investigational medicinal product code	
Other name	Fosamax®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Alendronate 70 mg tablet taken once a week during the open-label treatment phase.

Investigational medicinal product name	Romosozumab
Investigational medicinal product code	AMG 785
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Romosozumab 210 mg administered by subcutaneous injection once a month during the double-blind treatment phase.

Number of subjects in period 1	Alendronate/Alendro nate	Romosozumab/Alend ronate
Started	2047	2046
Received Double-blind Treatment	2040	2038

# Primary: Percentage of Participants with New Vertebral Fractures Through Month 24

End point title	Percentage of Participants with New Vertebral Fractures
	Through Month 24

#### End point description:

New vertebral fractures occurred when there was  $\geq 1$  grade increase from the previous grade of 0 in any vertebra from T4 to L4 using the Genant semiquantitative scoring method based on assessment of x-rays according to the following scale:

- Grade 0 (Normal) = no fracture;
- Grade 1 (Mild) = mild fracture, 20 to 25% reduction in vertebral height (anterior, middle, or posterior);
- Grade 2 (Moderate) = moderate fracture, 25 to 40% reduction in anterior, middle, and/or posterior height;
- Grade 3 (Severe) = severe fracture, greater than 40% reduction in anterior, middle, and/or posterior height.

The analysis was conducted in randomized participants with a baseline and  $\geq 1$  post-baseline evaluation of vertebral fracture at or before 24 months and includes participants who had vertebrae with missing Genant semiquantitative scores at baseline and whose first post-baseline spinal radiograph showed no fracture on the same vertebrae. Last observation carried forward imputation was used.

# Secondary: Percentage of Participants with Multiple New or Worsening Vertebral Fractures Through Month 24

End point title	Percentage of Participants with Multiple New or Worsening Vertebral Fractures Through Month 24
-----------------	---

#### End point description:

A new or worsening vertebral fracture was identified when there was a  $\geq 1$  grade increase from the previous grade in any vertebra from T4 to L4. A participant had multiple new or worsening vertebral fractures when there were  $\geq 2$  vertebrae from T4 to L4 with  $\geq 1$  grade increase from the previous grade. The multiple new or worsening vertebral fractures need not have occurred at the same visit. The analysis was conducted in randomized participants with a baseline and  $\geq 1$  post-baseline evaluation of vertebral fracture at or before 24 months and includes participants who had vertebrae with missing Genant semiquantitative scores at baseline and whose first post-baseline spinal radiograph showed no fracture on the same vertebrae. Last observation carried forward imputation was used.

#### End point description:

Bone mineral density (BMD) was measured by dual-energy x-ray absorptiometry (DXA). DXA scans were analyzed by a central imaging center.

The analysis was conducted in all randomized participants with a baseline and  $\geq 1$  post-baseline evaluation during the open-label period at or before month 24; Missing values were imputed by carrying forward the last non-missing post-baseline value in the open-label treatment period prior to the missing value.

#### Adverse events

## **Adverse events information**

Timeframe for reporting adverse events:

The 12-month double-blind treatment phase and overall study period which includes AEs up to the end of study for subjects who received an open-label dose and up to 12 months for subjects who did not; overall median duration of follow-up was 36 months.

Adverse event reporting additional description:

The safety analysis set included all randomized subjects who received  $\geq 1$  active dose of investigational product in the 12-month double-blind alendronate-controlled study period. Two participants randomized to alendronate received romosozumab in error and are counted in the romosozumab group for safety.

to diendronate received romosozumab in error and are counted in the romosozumab group for safety.	
Assessment type	Systematic

Dictionary name	MedDRA
Dictionary version	20.0

## Reporting groups

Reporting group title	12-Month Double-blind Period: Alendronate 70 mg QW

Reporting group description:

Participants received 70 mg alendronate once a week (QW) and placebo to romosozumab subcutaneously once a month for 12 months during the double-blind treatment period.

Reporting group title	Overall Study: Alendronate / Alendronate

Reporting group description:

Participants received 70 mg alendronate once a week and placebo to romosozumab subcutaneously once a month for the first 12 months. After completion of the 12-month double-blind treatment period participants continued to receive 70 mg alendronate once a week until the end of the study.

Reporting group title	Overall Study: Romosozumab / Alendronate

Reporting group description:

Participants received 210 romosozumab mg subcutaneously once a month and placebo to alendronate orally once a week for the first 12 months. After completion of the 12-month double-blind treatment period participants received 70 mg alendronate once a week until the end of the study.

Reporting group title	12-Month Double-blind Period: Romosozumab 210 mg QM

Reporting group description:

Participants received 210 mg romosozumab subcutaneously once a month (QM) and placebo to alendronate orally once a week for the first 12 months during the double-blind treatment period.

# Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 April 2012	<ul> <li>Subjects with a reported history of hearing loss associated with cranial nerve VIII compression due to excessive bone growth were excluded from study participation.</li> <li>A physician was to be available during administration of investigational product, and all subjects were closely observed for approximately 30 minutes after dosing with IP.</li> <li>The investigator was to be alerted if a subject experienced a BMD loss from baseline of ≥ 7% at the total hip and/or at the lumbar spine at any time during the study, and was required to discuss implications for individual fracture risk, alternative treatment options, and options for continuing in the study with the subject.</li> </ul>
14 November 2012	Following regulatory agency feedback, this amendment incorporated changes to facilitate optimal evaluation of the risk/benefit profile of romosozumab, to clarify statistical considerations, and to outline expectation for reporting of serious adverse events. Study procedures were simplified there was no impact on the evaluation of study objectives.  - Amended exclusion criteria to ensure that pre-existing disorders and/or the administration of medications did not confound the risk/benefit assessment for romosozumab.  - Amended proscribed treatments during the study to ensure those did not confound the risk/benefit assessment for romosozumab.  - Provided more detail on the adjudication of possible events of osteonecrosis of the jaw, atypical femoral fractures, and cardiovascular events.  Statistical considerations:  - Clarified that worsening vertebral fractures were considered for endpoints evaluating the incidence of all fractures.  - For endpoints evaluating the incidence of major osteoporotic fractures, corrected the definition to include forearm instead of wrist fractures.  - Baseline total hip BMD T-score was aligned with the Statistical Analysis Plan as an adjustment factor for the evaluation of new vertebral fracture incidence. Serious adverse event reporting:  - Specified that serious adverse events must be reported within 24 hours after the investigatori¦s knowledge of the event and clarified the point of reference for evaluation of expectedness of serious adverse events. Changes to study procedures:  - Clarified the day 1 lumbar spine DXA scan may have been taken together with the screening proximal femur DXA scan for subject convenience.  - Replaced the month 21 clinic visit with a telephone call.  - For subjects participating in the Imaging and PK/BTM /Biomarker Substudy, the spine QCT assessments at month 36 and the end-of-study visits were eliminated.
21 June 2013	The eligibility criteria were modified to allow participation of a wider range of subjects. Criteria revisions included the following:  - Lowering the minimum age from 60 to 55 years and allowing 3 additional qualifying BMD and fracture history combinations.  - The protocol-mandated off-treatment times for exclusionary medications were revised.  - Rescreening was allowed for subjects who previously failed screening if in the opinion of the investigator the reason for the initial screen failure has resolved or was no longer applicable.  - Based on regulatory agency feedback, assessments for formation of antiromosozumab antibodies were added at the month 1 and month 3 study visits to allow a more comprehensive characterization of the antibody response.  - Retesting of serum calcium would be permitted within the screening window if the initial test indicated an elevated level of serum calcium within 1.1 x the upper limit of normal.

#### 08 July 2015

The protocol was amended to include the addition of a Final Analysis. The study's previous primary analysis remained unchanged.

- Upon completion of the primary analysis period, subjects were followed for nonvertebral fractures. Subjects and site personnel remained blinded to initial treatment assignments and the study proceeded in an event-driven manner. The final analysis (end-of-study) occurred when nonvertebral fracture events were confirmed for at least 440 subjects, or earlier if the primary analysis demonstrated superiority of romosozumab treatment for nonvertebral fracture risk reduction. The duration of participation for subjects was changed from 25 to 59 months if study completion was achieved at primary analysis, or from 37 to 71 months if study completion was achieved when 440 subjects experienced a nonvertebral fracture.
- Approximately 200 subjects were planned to be enrolled in an Imaging and PK/BTM/Biomarker Substudy, with a subset of approximately 100 subjects participating in the imaging (DXA, QCT) portion of the substudy.
- The exclusion criteria for hyper-/hypothyroidism and hyper-/hypoparathyroidism were clarified.
- The month 15 study visit was eliminated for all but the substudy participants, and sampling for antibody testing was added to the month 18 visit. The end of primary analysis and end-of-study visits were replaced by telephone contact.

#### 14 September 2016

- Moved the following month-12 exploratory endpoints to secondary endpoints: nonvertebral fracture, hip fracture, major osteoporotic fracture (hip, forearm, humerus, and clinical vertebral).
- Added clinical vertebral fracture as a new month-12 secondary endpoint.
- Added new endpoints to the overall study period and the month 12 to 24 openlabel alendronate period.
- Added the following new secondary endpoints through month 24 during the primary analysis period: clinical fracture, nonvertebral fracture, hip fracture, and clinical vertebral fracture.
- Based on regulatory agency feedback, DXA BMD endpoints were added to the testing sequence for multiplicity adjustment.

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

### **Limitations and caveats**

None reported
