Global end of trial reached?	Yes	
Global end of trial date	19 November 2020	
Was the trial ended prematurely?	No	

Notes:

# General information about the trial

Main objective of the trial:

This was a Phase 2/3, open-label, multicenter study to evaluate the pharmacokinetics (PK), efficacy, and safety of ombitasvir/paritaprevir/ritonavir (OBV/PTV/RTV) with or without dasabuvir (DSV) and with or without ribavirin (RBV) in Hepatitis C virus (HCV) genotype 1 or 4 (GT1 or GT4)-infected pediatric subjects of  $\geq$  3 to 17 years of age. The study population for Part 1, the PK study, included GT1-infected subjects who were noncirrhotic and treatment-naïve (TN). Part 2, the safety and efficacy study, included GT-1 or GT4-infected subjects  $\geq$  12 to 17 yrs old who were TN or interferon ([IFN] or Pegylated-interferon alfa-2a or 2b [pegIFN] with or without RBV) treatment-experienced (TE) without cirrhosis or with compensated cirrhosis. In Part 1 and Part 2, the treatment regimen and duration were dependent on HCV GT, GT1 subtype, and cirrhosis status.

# Protection of trial subjects:

The investigator or his/her representative explained the nature of the study to the subject's parent(s)/legal guardian(s) and answered all questions regarding the study. Pediatric subjects were to be included in all the discussions in order to obtain written assent. Prior to any study-related screening procedures being performed on the subject, the informed consent statement was to be reviewed and signed and dated by subject's parent(s)/legal guardian(s) and the person who administered the informed consent, and any other signatories according to local requirements. Additionally, in keeping with each institution's IEC requirements, if applicable, an informed assent form will also to be obtained by each subject, as appropriate for age and country, prior to any study-related procedures being performed.

Background therapy: -	
Evidence for comparator: -	
Actual start date of recruitment	30 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

# Population of trial subjects

Subjects enrolled per country		
Country: Number of subjects enrolled	Puerto Rico: 2	
Country: Number of subjects enrolled	United States: 44	
Country: Number of subjects enrolled	Belgium: 4	
Country: Number of subjects enrolled	Germany: 5	
Country: Number of subjects enrolled	Spain: 9	
Worldwide total number of subjects	64	
EEA total number of subjects	18	

Notes:

Subjects enrolled per age group		
In utero	0	
Preterm newborn - gestational age < 37 wk	0	
Newborns (0-27 days)	0	
Infants and toddlers (28 days-23 months)	0	
Children (2-11 years)	26	
Adolescents (12-17 years)	38	
Adults (18-64 years)	0	
From 65 to 84 years	0	
85 years and over	0	

# **Subject disposition**

#### Recruitment

Recruitment details: -

# **Pre-assignment**

Screening details:

Safety population: all participants who received at least one dose of study drug in Part 1 or Part 2

D0	rı		а	
		റ		

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

#### **Arms**

Are arms mutually exclusive?	Yes
Arm title	Adult tablet, 12-17 yr, Part 1

# Arm description:

Participants with HCV GT1b without cirrhosis received the adult 3-DAA (OBV/PTV/RTV and DSV) regimen: two 12.5 mg ombitasvir /75 mg paritaprevir /50 mg ritonavir tablets taken orally every morning (QD) and one dasabuvir 250 mg tablet taken orally twice a day (BID) for 12 weeks. Participants with HCV GT1a without cirrhosis received 12-week treatment with the adult 3-DAA regimen and ribavirin 200 mg tablets were administered orally per local label.

Arm type	Experimental
Investigational medicinal product name	Ombitasvir/paritaprevir/ritonavir
Investigational medicinal product code	
Other name	Ombitasvir also known as ABT-267, paritaprevir also known as ABT-450, Ombitsvir/paritaprevir/ritonavir also known as Viekirax
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

#### Dosage and administration details:

Participants received the adult OBV/PTV/RTV formulation: two 12.5 mg ombitasvir /75 mg paritaprevir/50 mg ritonavir tablets taken orally every morning (QD) for 12 weeks.

Investigational medicinal product name	Dasabuvir
Investigational medicinal product code	
Other name	Exviera, ABT-333
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

## Dosage and administration details:

Participants received one dasabuvir 250 mg tablet taken orally twice a day (BID) for 12 weeks.

Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

# Dosage and administration details:

Ribavirin 200 mg tablets were administered orally for 12 weeks per local label for those participants with HCV GT1a.

Arm title	Adult tablet, 12-17 yr, Part 2
-----------	--------------------------------

### Arm description:

Participants with HCV GT1b received the adult 3-DAA (OBV/PTV/RTV and DSV) regimen: two 12.5 mg ombitasvir /75mg paritaprevir /50 mg ritonavir tablets taken orally every morning (QD) and one

dasabuvir 250 mg tablet taken orally twice a day (BID) for 12 weeks. Participants with HCV GT1a without cirrhosis received 12-week treatment with the adult 3-DAA regimen and ribavirin 200 mg tablets were administered orally per local label. Participants with HCV GT1a with compensated cirrhosis received 24-week treatment with the adult 3-DAA regimen and ribavirin 200 mg tablets were administered orally per local label. Participants with HCV GT4 received 12-week treatment with the OBV/PTV/RTV formulation and ribavirin 200 mg tablets were administered orally per local label.

Arm type	Experimental
Investigational medicinal product name	Ombitasvir/paritaprevir/ritonavir
Investigational medicinal product code	
Other name	Ombitasvir also known as ABT-267, paritaprevir also known as ABT-450, Ombitsvir/paritaprevir/ritonavir also known as Viekirax
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details:	
Participants received the adult OBV/PTV/RTV formulation: two 12.5 mg ombitasvir /75 mg paritaprevir/50 mg ritonavir tablets taken orally every morning (QD) for 12 weeks (HCV GT1b, GT1a without cirrhosis, and GT4) or 24 weeks (HCV GT1a with compensated cirrhosis).	
Investigational medicinal product name	Dasabuvir
Investigational medicinal product code	
Other name	Exviera, ABT-333
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details:	
Participants received one dasabuvir 250 mg tablet taken orally twice a day (BID) for 12 weeks (HCV GT1b, GT1a without cirrhosis) or 24 weeks (HCV GT1a with compensated cirrhosis).	
Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Docago and administration dotails:	

Dosage and administration details:

Ribavirin 200 mg tablets were administered orally per local label for 12 weeks (HCV GT1a without cirrhosis and GT4) or 24 weeks (HCV GT1a with compensated cirrhosis).

Arm title	Mini tablet, 9-11 yr, Part 1

# Arm description:

Participants with HCV GT1b without cirrhosis were to receive the mini-tablet 3-DAA (OBV, PTV, RTV, and DSV) regimen for 12 weeks: ombitasvir 0.3 mg, paritaprevir 1.0 mg, and ritonavir 1.0 mg mini-tablets administered orally QD based on body weight and dasabuvir taken orally BID as 3.08 mg mini-tablets based on body weight. Participants with HCV GT1a without cirrhosis received 12-week treatment with the mini-tablet 3-DAA regimen and ribavirin was provided as a 40 mg/mL oral solution and administered per local label.

Arm type	Experimental
Investigational medicinal product name	Ombitasvir
Investigational medicinal product code	
Other name	ABT-267
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received the 0.3 mg mini-tablet formulation for 12 weeks, administered orally QD based on body weight.

Investigational medicinal product name	Paritaprevir
Investigational medicinal product code	
Other name	ABT-450

Pharmaceutical forms	Film-coated tablet

# Statistical analyses

No statistical analyses for this end point

# Primary: Parts 1 and 2: Percentage of participants with sustained virologic response 12 weeks after the last actual dose of study drug (SVR12)

End point title	Parts 1 and 2: Percentage of participants with sustained
•	virologic response 12 weeks after the last actual dose of study
	drug (SVR12) <sup>[49]</sup>

#### End point description:

SVR12 is defined as hepatitis C virus ribonucleic acid (HCV RNA) < lower limit of quantification (LLOQ) 12 weeks after the last actual dose of study drug.

End point type Primary

End point timeframe:

12 weeks after last dose of study drug (Week 24 or 36 depending on treatment duration)

#### Notes:

[49] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: According to the Highlights of Prescribing Information of PEGASYS, the SVR24 rate was 47% among 45 treatment-naïve pediatric participants with HCV GT1 in the NV17424 trial. To show that the DAA regimen is superior to this current standard of care by 20%, the lower bound of the 2-sided 95% confidence interval of the SVR12 rate across all participants in the study must be greater than 67%. The Wilson's score method was used to calculate the confidence interval.

#### **Adverse events**

## **Adverse events information**

Timeframe for reporting adverse events:

Treatment-emergent adverse events (TEAEs) and serious adverse events (TESAEs) collected from 1st dose of study drug until 30 d after last dose, up to 37 wks. SAEs and protocol-related nonserious AEs were collected from the time the subject signed consent

Adverse event reporting additional description:

TEAEs and SAEs are defined as any AE or SAE with onset or worsening reported by a participant from the time that the first dose of study drug is administered until 30 days have elapsed following discontinuation of study drug. TEAEs were collected whether elicited or spontaneously reported by the participant.

# **More information**

# Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 July 2015	<ul> <li>Modified language regarding fibrosis assessments at screening</li> <li>Added longitudinal FibroTest to study procedures</li> <li>Added an additional virologic failure criterion</li> <li>Edited ALT monitoring and management parameters</li> <li>Added information regarding drug storage</li> <li>Added Medical Complaint language</li> <li>Added an additional efficacy endpoint in Part 2 of the study</li> </ul>
07 July 2016	<ul> <li>Reduced the sample size in Part 2</li> <li>Changed treatment of GT1b-infected patients with compensated cirrhosis to OBV/PTV/RTV and DSV without RBV for 12 weeks</li> <li>Changed treatment of GT4-infected patients with compensated cirrhosis to OBV/PTV/RTV and RBV for 12 weeks</li> <li>Updated contraceptive language in the protocol</li> <li>Added the guidelines that were followed regarding total blood loss per patient during the study</li> <li>Provided additional details for alternate management for subjects meeting virologic failure criteria</li> <li>Incorporated Administrative Change 1.0 to update the DSV strength concentration</li> </ul>
21 August 2017	<ul> <li>Removed pellets formulation from the study, and changed all endpoints to remove the pellet formulation</li> <li>Removed aspartate aminotransferase-to-platelet ratio index (APRI) from study procedures</li> <li>Updated contraceptive language in the protocol</li> <li>Updated virologic failure criteria</li> <li>Reduced the duration of LTFU Period</li> </ul>

Notes:

# **Interruptions (globally)**

Were there any global interruptions to the trial? No

# **Limitations and caveats**

None reported
