### Clinical trial results:

A phase III randomised, double-blind trial to evaluate efficacy and safety of once daily empagliflozin 10 mg compared to placebo, in patients with chronic Heart Failure with reduced Ejection Fraction (HFrEF)

### **Summary**

EudraCT number	2016-002280-34

Notes:

Paediatric regulatory details	
Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage	
Analysis stage	Final

Date of interim/final analysis	14 July 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 May 2020
Was the trial ended prematurely?	No

Notes:

### General information about the trial

Main objective of the trial:

The objective of this event-driven trial was to demonstrate superiority of empagliflozin 10 mg versus placebo on top of guideline-directed medical therapy in patients with symptomatic, chronic HF and reduced left ventricular ejection fraction (LVEF  $\leq$ 40%).

### Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. Rescue medication was allowed for all patients as required.

Background therapy: -	
Evidence for comparator: -	
Actual start date of recruitment	06 April 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	e Yes
Notes:

Worldwide total number of subjects	7220
EEA total number of subjects	2259

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	3144
From 65 to 84 years	3909
85 years and over	167

### **Subject disposition**

### Recruitment

Recruitment details:

A randomised, double-blind trial to demonstrate superiority of empagliflozin versus placebo, in patients with chronic Heart Failure with reduced Ejection Fraction (HFrEF).

### **Pre-assignment**

Screening details:

Patients were included in the trial after they had signed the informed consent form (ICF). All patients who met the all inclusion and none of the exclusion criteria during screening and at the randomisation approximately 1 to 4 weeks later were randomised to empagliflozin or placebo in a 1:1 ratio.

Period 1	
Period 1 title	Discontinuation from Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Assessor, Investigator, Monitor, Carer, Data analyst
Blinding implementation details:	
	olved in the trial conduct or analysis or with any other interest in ith regard to the randomised treatment assignements until after
Arms	
Are arms mutually exclusive?	Yes

_	
Δrm	description:
$\neg$	ucscription.

Arm title

1 film-coated tablet of matching placebo was administered orally once daily.

Placebo

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

 ${\bf 1}$  film-coated tablet of matching placebo was administered orally once daily.

I fill coated tablet of matering placebo was administered orany once daily.	
Arm title	10 mg Empagliflozin
Arm description:	
Film-coated tablet of 10 milligram (mg) Empagliflozin was administered orally once daily.	
Arm type	Experimental
Investigational medicinal product name	Empagliflozin
Investigational medicinal product code	

in estigational medicinal product name	Linpaginio Lin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Film-coated tablet of 10 milligram (mg) Empagliflozin was administered orally once daily.

Number of subjects in period <b>1</b> <sup>[1]</sup>	Placebo	10 mg Empagliflozin
Started	1867	1863
Treated	1863	1863
Completed	1352	1381
Not completed	515	482
Protocol deviation	6	5
Patient moved away/being abroad	4	3
Reason Unknown	-	1
Patient decision to stop/interrupt medication	8	6
Due to Covid-19 Pandemic	1	4
Unable to continue treatment	4	1
Consent withdrawn by subject	124	92
Principle Investigator Decision	2	-
Not treated	4	-
Patient received Empagliflozin for Diabetes	1	1
Unblinded medication	1	-
Personal Reasons	1	1
Not attending study visit	3	10
Adverse Event	343	337
Other medical condition (no Adverse Event)	2	4
Lost to follow-up	11	17

### Notes:

Justification: 7220 patient were enrolled world wide, whereas 3730 patients actually started the trial.

<sup>[1] -</sup> The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Secondary: Change from baseline in KCCQ (Kansas City cardiomyopathy questionnaire) clinical summary score at Week 52	
End point title	Change from baseline in KCCQ (Kansas City cardiomyopathy

### End point description:

The KCCQ is a 23-item self-administered questionnaire designed to evaluate physical limitations, symptoms (frequency, severity, and changes over time), social limitations, self efficacy, and quality of life in patients with Heart Failure. The KCCQ-clinical summary score comprises the following domains: Symptom frequency, symptom burden and physical limitation. The score is calculated by summing domain responses and then transforming scores to a 0-100 unit scale with higher scores indicating better health status. For patients who died, a worst score (score of 0) is imputed at all subsequent scheduled visits after the date of death. Standard error is adjusted standard error. Change from baseline in KCCQ-score at week 52 was modeled using a MMRM with visit (week 12, 32 and 52) as repeated measures, adjusted mean (standard error) at week 52 is reported. Patients in the randomized set (RS) with available data for this endpoint, including values obtained on treatment or post-treatment.

### Statistical analyses

-	Statistical analysis title	Joint frailty model
---	----------------------------	---------------------

Statistical analysis description:

Joint frailty model with terms for age, baseline eGFR (CDK-EPI), region, sex, baseline diabetes status and baseline LVEF. Model accounts for dependence between recurrent all-cause hospitalizations and all-cause mortality.

cause mortality.	
Comparison groups	Placebo v 10 mg Empagliflozin
Number of subjects included in analysis	3730
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.0065
Method	Joint frailty model
Parameter estimate	Hazard ratio (HR)
Point estimate	0.85
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.75
upper limit	0.95

### Adverse events

### **Adverse events information**

Timeframe for reporting adverse events:

[All-Cause Mortality]: From randomization until end of planned treatment period, up to 1040 days. [Serious/Other AE]: From first intake of study medication until end of planned treatment period + 7 days (Residual Effect Period), up to 1047 days.

Adverse event reporting additional description:

[All-Cause Mortality]: Randomised Set: All randomised patients. The actual number of participants at risk for all-cause deaths is 1867 for Placebo group. [Serious Adverse Events and Other Adverse Events]: Treated Set: All patients treated with at least one dose of study drug.

Assessment type	Systematic			
Dictionary used				
Dictionary name	MedDRA

## **More information**

## Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 November 2017	The screening period was extended by 7 days. It was also clarified that screening procedures could be performed over multiple days; Additional criteria for N-terminal pro-brain natriuretic peptide (NT-proBNP) were added for patients with documented HHF in inclusion criterion 5; Implantable cardioverter defibrillator (ICD) and Cardiac resynchronisation therapy (CRT) (and intention to implant thereof) were added to exclusion criterion 29; The exploratory secondary endpoint "first occurrence of sustained reduction of ≥40% Estimated glomerular filtration rate (eGFR)" was further specified; An Electrocardiogram (ECG) was to be performed at screening rather than the baseline visit; For laboratory analyses at screening, a haematology panel was added while urinalysis was removed; A national coordinator committee was set up to advise on the trial. An explanation was added to the protocol; The ketone monitoring strategy for patients with Type 1 diabetes mellitus (T1DM) was added; The guidance to sites on the consent process for patients with T1DM was added.
18 July 2018	No major changes to the protocol were introduced by this amendment. The changes involved logistical or administrative aspects only and did not require Independent ethics committee (IEC)/ Institutional review board (IRB) approval (unless required by local regulations).
20 November 2019	The use of any Sodium-dependent glucose co-transporter (SGLT)-2/1 inhibitors was allowed during the 30 day-period between the end-of-trial visit (EOT) and the follow-up visit occurring at study close-out; Changes to the planned analyses to be consistent with the changes introduced by the TSAP.

Notes:

## **Interruptions (globally)**

Were there any global interruptions to the trial? No

## **Limitations and caveats**

None reported
