Analysis stage	Final	
Date of interim/final analysis	20 April 2016	

Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 April 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to evaluate the effect of treatment with romosozumab for 12 months compared with placebo on percent changes from baseline in bone mineral density (BMD) at the lumbar spine as assessed by dual-energy x-ray absorptiometry (DXA) in men with osteoporosis.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) and applicable regulatory requirements.

All subjects provided written informed consent before undergoing any study-related procedures, including screening procedures.

The study protocol, amendments, and the informed consent form (ICF) were reviewed by the Institutional Review Boards (IRBs) and Independent Ethics Committees (IECs). No subjects were recruited into the study and no investigational product (IP) was shipped until the IRB/IEC gave written approval of the protocol and ICF and Amgen received copies of these approvals.

Background therapy: -	
Evidence for comparator: -	
Actual start date of recruitment	16 June 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

From 65 to 84 years	197
85 years and over	6

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 31 centers in Europe, North America, Latin America, and Japan. Participants were enrolled from 16 June 2014 to 27 January 2015.

Pre-assignment

Screening details:

Participants were randomized in a 2:1 ratio to receive 210 mg romosozumab or matched placebo in a blinded fashion for the duration of the 12-month treatment period. Randomization was stratified by geographic region (Europe, North America, Latin America, and Japan).

Period 1		
Period 1 title	Overall study (overall period)	
Is this the baseline period?	Yes	
Allocation method	Randomised - controlled	
Blinding used	Double blind

Lumbar Spine BMD T-score			
The T score is the hone mineral density	(PMD) at the cite wh	on compared to that of	a haalthy thirty

The T-score is the bone mineral density (BMD) at the site when compared to that of a healthy thirty-year-old. Normal is a T-score of -1.0 or higher; Osteopenia is defined as between -1.0 and -2.5; Osteoporosis is defined as -2.5 or lower, meaning a bone density that is two and a half standard deviations below the mean of a thirty-year-old man/woman.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	1	Amendment
	15 July 2014	 Inclusion criteria: Number 103: added assessment by the central imaging vendor at screening for BMD T-scores Exclusion criteria and Excluded treatments: deleted tibolone. Study procedures: Clarified intervals for DXA scans taken for the screening period; defined day 1 and subsequent visit dates.

EU-CTR publication date: 13 April 2017

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
